

Zeal Education Society's

ZEAL COLLEGE OF ENGINEERING & RESEARCH, PUNE – 41

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

NAAC Accredited with A+ Grade / ISO 21001:2018

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGINEERING

Curriculum Structure and Syllabus of

F.Y. B. Tech. – Electronics and Telecommunication Engineering

(With effect from - Academic Year 2024- 25)

VISION OF THE INSTITUTE

To be a premier institute in technical education by imparting academic excellence, research, social and entrepreneurial attitude.

MISSION OF THE INSTITUTE

- To achieve academic excellence through innovative teaching and learning process.
 - To imbibe the research culture for addressing industry and societal needs.
 - To inculcate social attitude through community engagement initiatives.
 - To provide conducive environment for building the entrepreneurial skills.

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

VISION:

To become one of the leading center in the field of Electronics and Telecommunication Engineering, developing competent engineers through innovative teaching, research promotion, social responsibility, and entrepreneurial skills.

MISSION:

M1: To improve continually the teaching learning process through well mechanized monitoring and feedback system.

M2: To create and establish research facilities for fulfilling research and learning needs of the students.

M3: To provide conducive environment for becoming socially responsible engineers.

M4: To strengthen industry-institute interaction to produce ready to work Engineers and entrepreneurs.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs):

PEO1: Graduates will excel in the area of analog and digital signal processing, embedded systems, VLSI, electronic product design etc., demonstrating leadership and managerial expertise in the electronics & telecommunication industry.

PEO2: Graduates will exhibit the professional skills, ethical and moral values, capabilities of working as an individual and in a team to fulfill the need of industries and society.

PEO3: Graduates will develop entrepreneurial skills to create innovative solutions, while continuously learning and staying updated for career growth in electronics and telecommunication engineering.

PROGRAM OUTCOMES (POs):

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

- PO4: Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5: Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO6: The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7: Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8: Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9: Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10: Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11: Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12: Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs):

- PSO1:** To apply knowledge to identify, develop and test the electronics and tele-communication systems using hardware and software tools.
- PSO2:** To develop feasible solutions for real-time problems related to electronic circuit design, wireless sensor network, VLSI, embedded, microwave, Tele-communication, signal and image processing.

SYLLABUS

SEMESTER - I

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)								Semester: I	
Course: Engineering Mathematics - I								Code: ETBS101	
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)					
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total
03	-	-	03	40	60	-	-	-	100
Prerequisites:									
Basic concept of Differentiation, Integration, Maxima and Minima, Matrices and Determinants.									
Course Objectives:									
<ol style="list-style-type: none"> 1. To acquaint the students to rank of matrix, solution of simultaneous equations, Eigen values and Eigen vectors. 2. To acquire techniques of the expansion of functions about any point and to evaluate the indeterminate forms of limits. 3. To make students familiar with multivariable differentiation and its applications. 4. To introduce to student awareness of concept of Fourier series. 									
Course Outcomes: After completion of this course, students will able to -									
CO1	Use of matrix method for solving system of simultaneous linear equations.								
CO2	Find Eigen values and Eigen vectors of the matrix.								
CO3	Describe the power series expansion of a given function and evaluate limits.								
CO4	Understand the basic concepts of partial derivatives.								
CO5	Evaluate partial derivatives to estimate maxima and minima of function of multiple variables.								
CO6	Determine the Fourier series representation and harmonic analysis for design.								
Course Contents:									
Unit	Description								Duration (Hrs.)
1.	System of Linear Equations: Rank of a matrix, System of linear equations, Linear dependence and independence of vectors, Linear and orthogonal transformations, Application to problems in engineering.								7
2.	Eigen Values and Eigen Vectors, Diagonalization: Eigen values and Eigen vectors, Cayley-Hamilton theorem, Diagonalization of a matrix, Reduction of quadratic forms to canonical form by linear and orthogonal transformations.								7
3.	Differential Calculus: Rolle's theorem, Mean value theorems, Taylor's series and Maclaurin's series, Expansion of functions using standard expansions, Indeterminate forms.								7
4.	Partial Differentiation: Partial derivatives of first and higher orders, Euler's theorem on homogeneous functions, Partial derivative of composite functions, Total derivative and Implicit differentiation								7
5.	Applications of Partial Differentiation: Jacobians and their applications, Errors and Approximations. Maxima and minima of functions of two variables, Lagrange's method of undetermined multipliers.								7

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

6.	Fourier Series: Definition, Dirichlet's conditions, Full range Fourier series, Half range Fourier series, Harmonic analysis.	7

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: I		
Course: Engineering Physics							Code: ETBS102		
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)					
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total
02	02	-	03	40	60	25	-	-	125
Prerequisites:									
Fundamentals of Physics, basic of interference, polarization, de-Broglie hypothesis, semiconductor and ultrasonic.									
Course Objectives:									
<ol style="list-style-type: none"> 1. To make the students understand and study the basic principles of Physics. 2. To provide firm grounding to the students in the concept of physics to resolve many engineering and technological problems. 3. To impart the knowledge of the fundamentals of physics to the students through hands on experiments and extend it to relevant engineering applications. 									
Course Outcomes: After completion of this course, students will be able to -									
CO1	Explain basics of interference and polarization connected to engineering applications.								
CO2	Make use of Laser technology and Optical fiber in various disciplines.								
CO3	Outline the fundamentals of Quantum Physics and relate it to engineering applications.								
CO4	Apply basics of semiconductors for solving the engineering problems.								
CO5	Extend the understanding of Ultrasonic and NDT in engineering.								
CO6	Interpret the use of nanoparticles and superconductors in the field of engineering.								
Course Contents:									
Unit	Description								Duration (Hrs.)
1.	<p>Wave Optics: Units and its conversion-Length, Mass, Velocity, Acceleration Momentum, Time, Temperature, Wavelength, Energy, Current, Voltage, Power, Intensity, Amplitude, Frequency, Pressure, Resistance, compressibility, resistivity, conductivity, Mobility, Angle.</p> <p>Interference- Interference in thin film of uniform thickness and its conditions (Simple Numerical), Engineering Applications – Ant-Reflection coating (ARC). Polarization- Polarization and its types, Malus law and Brewster's law (Simple numerical), Double refraction, Huygens's theory of double refraction, Differentiate between positive & negative crystal, Engineering applications of polarization: Liquid Crystal Display (LCD).</p>								5
2.	<p>Laser and Optical Fiber: Laser- Basic Principles of laser, Elements of Laser, Characteristics of laser, He-Ne laser (Gas laser), Applications of laser – Medical, Industrial and Holography- Recording. Optical fibers- Propagation of light - Acceptance angle, Acceptance cone, Numerical aperture, Fractional Refractive Index Change (Simple numerical). Types of optical fibers, Advantages of optical fiber communication, Applications of optical fiber in Medical, Communication, Entertainment, Data Security.</p>								5

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

3.	<p>Quantum Physics: de-Broglie hypothesis of matter waves, de-Broglie wavelength for a particle accelerated by Kinetic Energy (K.E) and a charged particle accelerated by Potential difference (PD) “V”, (Simple Numerical), Properties of matter waves, Heisenberg’s uncertainty principle for wide wave packet and narrow wave packet (Simple Numerical), Tunneling Effect, Engineering applications - Scanning Tunneling Microscope (STM), Introduction to Quantum Computing.</p>	4
4.	<p>Semiconductor Physics: Classification of solids on the basis of band theory, Fermi level for metal and semiconductor, Position of Fermi level in extrinsic semiconductors (only diagram), Solar cell: principle, working, IV-characteristics, Efficiency and fill factor, Factor to improve efficiency of solar cell, Application, advantages and disadvantages of solar cell, Hall effect: derivation for Hall voltage and Hall coefficient (Simple numerical).</p>	5
5.	<p>Ultrasonic and Non-destructive Testing: Ultrasonic- Properties of ultrasonic waves, Piezoelectric effect and inverse of piezoelectric effect, Generation of ultrasonic waves by inverse piezoelectric effect (using transistor), Compressibility of liquid by using ultrasonic waves (Simple Numerical). Non- Destructive Testing (NDT): Definition and its objectives, Difference between destructive testing and non-destructive testing, Application of NDT as an Ultrasonic flaw detection technique (Simple numerical), Advantages of NDT.</p>	4
6.	<p>Nanophysics and Superconductivity: Nanophysics- Introduction of nanophysics, Properties of nanoparticles (Optical, Electrical, Mechanical), Applications of nanomaterials in Electronics, Automobile, Medical. Superconductivity- Definition of superconductivity on the basis of temperature dependence of resistivity, Properties of Superconductors, Meissner effect, Critical magnetic field (Simple Numerical), Type I and Type II Superconductors, Engineering applications of superconductivity in Superconducting Quantum Interface Device (SQUID) with its principle, working, general application of superconductors - Power Transmission, electronics, medical, principle of Maglev train.</p>	5
TOTAL		28

List of Experiments:

Perform any (08) experiment out of 12:

1. Experiment based on Newton’s rings (determination of wavelength of monochromatic light, determine radius of curvature of Plano-convex lens).
2. Experiment based on polarization (To verify Law of Malus).
3. Determination of refractive index using Brewster’s law.
4. Experiment based on Double Refraction (Determination of refractive indices / Identification of types of crystal).
5. Experiment based on Laser (Determination of thickness of wire / Number of lines on grating surface).
6. Determination of Planck’s constant using available experimental setup.
7. To study IV characteristics of Solar Cell and determine parameters (fill factor and efficiency).

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

- To determine Hall coefficient and charge carrier density.
- Determination of velocity of ultrasonic waves and compressibility of given liquid by using Ultrasonic Interferometer.
- An experiment based on optical fiber. (To determine the numerical aperture acceptance angle acceptance cone of optical fiber of laser diode.
- Experiment based on semiconductor (To determine the temperature dependence characteristics of semiconductor).
- To determine the unknown wavelength by using plane diffraction grating.
- Study visit to research laboratory/ facility and submit report (**Compulsory**).

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)								Semester: I	
Course: Basic Electronics Engineering								Code: ETES101	
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)					
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total
03	02	-	04	40	60	50	-	-	150
Prerequisites:									
<ol style="list-style-type: none"> 1. Basic understanding of electric circuits and components. 2. Knowledge of basic physics concepts such as electricity, magnetism, and semiconductor behavior. 3. Understanding of basic digital electronics principles like logic gates and number systems. 									
Course Objectives:									
<ol style="list-style-type: none"> 1. To understand the fundamentals of passive electronic components and semiconductor materials. 2. To master the principles and applications of diodes and special purpose diodes. 3. To familiarize with transistor operation, configurations, and applications. 									
Course Outcomes: After completion of this course, students will able to -									
CO1	Demonstrate proficiency in analyzing and designing electronic circuits utilizing passive components.								
CO2	Explain p-n junction diode and VI characteristics.								
CO3	Apply knowledge of transistor characteristics and configurations in circuit design.								
CO4	Utilize operational amplifiers in electronic circuit design and analysis.								
CO5	Recognize the principles of electronic measurements and instrumentation.								
CO6	Explain basic digital number system conversion.								
Course Contents:									
Unit	Description								Duration (Hrs.)
1.	Introduction to Electronics Components Introduction to Electronics: Evolution of Electronics, Impact of Electronics in industry and society. Introduction to Passive Components: Classification, Specifications and Color coding techniques of Resistors, Capacitors, Inductors. Introduction to Active Components: Construction, Types and Applications.								6
2.	Semiconductor materials Semiconductors: P-type and N-type, Current in semiconductors: Diffusion and Drift Current. P-N Junction Diode: Construction, working in forward and reverse bias, V-I characteristics, Diode applications: Diode as a switch, Diode as Rectifier: HWR, FWR, BR, Specifications of Rectifier diodes. Special purpose diodes: Zener diode: V-I Characteristics, Specification and Zener as voltage regulator, Light Emitting Diode (LED) and photo diode .								8
3.	Transistor Circuits Transistors: Construction, types, operation, Characteristics and region of operation, CB, CE, CC configurations, BJT as a switch and CE amplifier. FET: Introduction, Construction, Operation, V-I characteristics.								8

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

	Metal Oxide Semiconductor Field Effect Transistors (MOSFET): Types of MOSFET, n- Channel E-MOSFET : Construction, Operation, V-I characteristics.	
4.	Linear Integrated Circuits: Introduction to Op-amp, Functional block diagram of operational amplifier, ideal practical parameters, Concept of negative & positive feedback, Applications- Inverting and Non inverting amplifier. IC 555 timer as an oscillator, voltage regulation, IC voltage regulators (Three Pin)	6
5.	Electronic Measurements and Instrumentation Electronics measurements: Frequency measurements and conversions in various units like Hz, KHz, MHz etc, and Voltage, current and power Measurement units, measurement units for resistance, conductance, impedance, capacitance and inductance. Electronic Instruments: Principles and block diagram of digital multimeter, Function Generator, Digital Storage Oscilloscope (DSO) Power scope, AC/DC power supply, Auto transformer, Analog ammeter and voltmeter.	7
6.	Digital Number System And Boolean Algebra Introduction: Binary, octal, Decimal, Hexadecimal numbers, and its conversion. Signed Binary number representation: Signed Magnitude, 1's complement and 2's complement representation. Binary, Octal, Hexadecimal Arithmetic: 2's complement arithmetic. Boolean algebra and logic Gates: Boolean algebra, Basic theorems and properties of Boolean algebra. Logic Gates, DeMorgan's theorem.	7
TOTAL		42

List of Experiments:

Perform any Seven (07) experiments from Exp. No 1 to 9, 10th is compulsory:

1. Study of Active and Passive components: Resistors (Fixed & Variable), Calculation of resistor value using color code., Capacitors (Fixed & Variable), Inductors, Devices such Diode, BJT, MOSFETs, various IC packages, Switches & Relays.
2. Measurements using various measuring equipments:
 - i) Set up CRO and function generator for measurement of voltage, frequency.
 - ii) Obtain the phase shift between two signals using CRO with the help of Lissagous pattern.
 - iii) Measure voltage, resistance using digital multimeter. Also use multimeter to check diode, BJT.
3. Build and test circuits using Semiconductor devices and Plot V-I characteristics:
 - i) P-N Junction Diode (Study the datasheet of typical PN junction diode 1N 400X).
 - ii) Zener Diode (Study the datasheet of typical Zener diode 1N 4148).
4. Build and test Rectifier circuits:
 - i) Implement half wave, full wave and bridge rectifier using diodes.
 - ii) Observe the effect of capacitor filter on rectifier output.
5. Study of Single stage BJT Common Emitter amplifier circuits.
 - i) Identify pins of a BJT (Such as BC547) and Study its datasheet specifications.
 - ii) To measure voltage and observe waveforms at input and output terminals of single stage BJT Common Emitter amplifier circuits.
 - iii) Calculate Voltage Gain of the amplifier.

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

6. Study of Op-amp based amplifier circuits: Build inverting and non-inverting amplifier using op-amp (Study the datasheet of typical Op-Amp 741)
7. Study of IC 555 Timer Circuits.
 - i) Identify pins of IC 555 Timer Circuits.
 - ii) Observe output waveforms and measure frequency of output of IC 555 Timer used in Astable Mode.
8. Study of convergence of number system:
 - i) a) Convert the any number system into its Binary equivalent.
 - ii) b) Convert the any number system into its Octal equivalent.
 - iii) c) Convert the any number system into its decimal equivalent.
 - iv) d) Convert the any number system into its Hexa decimal equivalent.
9. Verify truth table of Basic Gates.
10. Case Study of any one electronics appliances with block diagram, specification etc. **(Compulsory)**

Text Books:

1. Thomas. L. Floyd, "Electronics Devices", 9th Edition, Pearson.
2. R.P. Jain, "Modern Digital Electronics", 4th Edition, Tata McGraw Hill.
3. H.S. Kalsi, "Electronic Instrumentation", 3rd Edition, Tata McGraw Hill.

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: I			
Course: Electronics Circuit Design							Code: ETES102			
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)						
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total	
02	02	-	03	40	60	50	25	-	175	
Prerequisites:										
Basics of Physics.										
Course Objectives:										
<ol style="list-style-type: none"> 1. To enable students to comprehend and identify various electronic symbols and components used in electrical and electronic circuits. 2. To develop the ability to design and analyze basic electronic circuits involving resistors, capacitors, inductors, and special purpose diodes. 3. To equip students with the skills to apply PCB design guidelines and construct oscillator and amplifier circuits effectively. 										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Identify the symbols for various electronic components, demonstrating foundational knowledge.									
CO2	Calculate the equivalent capacitance, resistance, and inductance in series and parallel circuits.									
CO3	Design circuits using special purpose diodes, including Zener and tunnel diodes.									
CO4	Test and troubleshoot electronic components and circuits using millimeters and oscilloscopes.									
CO5	Develop PCB layouts following standard guidelines for single-sided and double-sided boards.									
CO6	Design various types of oscillators and amplifiers, applying theoretical concepts to practical implementations.									
Course Contents:										
Unit	Description								Duration (Hrs.)	
1.	Introduction to electronics Symbols: Series and parallel connections of resistors, capacitor, and inductors, Calculation of equivalent capacitance resistance and inductance, symbols of LDR, potentiometer, 555, toggle switch. USB, Interface and Connector, Reset Button, Power button, Digital Input/output pins, Analog Pins, Microprocessor and Microcontroller block diagram.								5	
2.	Introduction electrical component and Symbol: D.C., A.C., Positive, Negative, Single Phase A.C. 50 Hz , Three Phase A.C., 50 Hz, A.C. / D.C., 3-Phase line, Neutral line ,Earth, Cell, Photo voltaic cell , Battery, Single pole single throw switch, Push-button switch, Energy meter, Alternator, Generator, D.C. Motor, Two-way switch, Fuse, Socket 2 pin, 3 pin, Aerial / Antenna, Voltmeter, Ammeter, Relay contacts, Transformer tapped secondary, Shielded wire.								5	
3.	Circuit Design with special purpose diode: Zener Diode Applications: As reference voltage device, In constant current source with transistor, In over voltage protection, In clipping and clamping circuit, Clipper and clamper circuit, Dc power supply drawing, The Laser Diode, Optoisolator,								5	

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

	Tunnel Diode, Tunnel Diode Oscillator, Varactor Diode, Application of Varactor Diode, Shockley Diode Testing of components using millimeter or oscilloscope.	
4.	Circuit Design with Electronics components: Construction and symbols of IGBT, SCR, TRIAC, DIAC, Design of Instrumentation amplifier, Applications of IGBT, SCR, TRIAC, and DIAC.	5
5.	PCB Design guidelines: Introduction, Layout, Layout scale, Layout approach, Layout Procedure, PCB Types and Sizes: Single sided PCB and Double sided PCB.	4
6.	Design of oscillator and Amplifier: Oscillator design: Crystal Oscillator, Hartley oscillator, RC Phase Shift Oscillator, Colpitts Oscillators, Wien Bridge Oscillator. Amplifier: Class A Amplifier, Class B Amplifier, Class AB Amplifier, Class C Amplifier	4
TOTAL		28

List of Experiments:

Total 8 experiments: Any 4 experiment from 1 to 7 should be drawn on Sheets. Any One experiment from 8 and 9. Any 3 experiments from 10 to 15.

1. Draw the symbols of various electronics and Electrical components: D.C., A.C. Positive. Negative. Single Phase A.C. 50 Hz. Three Phase A.C., 50 Hz. A.C. / D.C. 3-Phase line, Earth, Cell, Battery, Single pole single throw switch, Push-button switch, Energy meter, Alternator, Generator, D.C. Motor.
2. Draw the symbols of various electronics and Electrical components: A.C. Motor Single phase, 3-phase squirrel cage motor, 3-phase slip ring motor. Capacitor: Fixed, variable, Electrolytic Capacitor, Two-way switch, Fuse, Socket 2 pin, 3 pin, Aerial / Antenna, Voltmeter, Ammeter, Ohm Meter, Watt Meter, Lamp, Electric bell, Buzzer, Connections: star, Delta, Choke, Transformers, Resistor: Fixed, Resistor: variable, Diode, Auto transformer.
3. Draw the symbols of various electronics and Electrical components: Zener diode, Schottky diode, SCR, TRIAC, PNP transistor, NPN transistor, FET N-channel, FET P-channel, Unijunction transistor.
4. Draw inverter will once again connect the load, which are connected to its output to the main supply.
5. Draw Lamp dimmer cum universal speed controller circuit.
6. Draw circuit connections of a 12V, 1A regulated power supply using 7812.
7. Draw circuit of Stepped voltage stabilizer-manual.
8. Testing or measuring various electronics/electrical components using millimeter or oscilloscope.
9. Soldering techniques.
10. Design circuit with connection of resistors, capacitor in series and parallel. Simulate and measure voltages at each point.
11. Design circuit drawing using Diode and special purpose diode and simulate it.
12. Design Simulate Battery and LEDs connected with switch measure voltages at each point
13. Design and simulate logic for controlling LED by using two switches.
14. Design and simulate Inverting and non-inverting amplifier
15. Design and simulate DC power supply and measure the voltages.

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: I			
Course: IT Proficiency							Code: ETVS101			
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)						
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total	
-	04	-	02	-	-	25	-	-	25	
Prerequisites:										
Basic Computer Skills										
Course Objectives:										
1. To develop proficiency in essential office software and tools, including MS Word, MS Excel, MS PowerPoint, and LaTeX, to create, analyze, and present professional documents and data effectively, while understanding ethical internet use and leveraging AI tools.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Create and format professional documents using MS Word.									
CO2	Organize and analyze data using Excel's features.									
CO3	Analyze and visualize complex data with pivot tables and charts.									
CO4	Analyze advanced Excel functions, pivot tables, macros, and data protection techniques.									
CO5	Create Professional Documents Using LaTeX.									
CO6	Apply ethical practices in using internet resources and AI tools.									
Course Contents:										
Unit	Description								Duration (Hrs.)	
1.	Basics of Computer and MS Word: Awareness of computer Basics MS-Word: Text Basics, Text Formatting and saving file, Working with objects, Header & footers, Working with bullets and numbered lists, Tables, Styles and Content, Merging documents, Sharing and maintaining document, Proofing the document, Printing.								08	
2.	MS-Excel: Introduction to Excel, Formatting excel work book, Perform calculations with functions, Sort and Filter data with Excel, Create effective 2D and 3D charts to Present data visually.								10	
3.	Advance MS-Excel: Analyze data using pivot tables and pivot charts, Protecting and sharing the work book, Use Macros to automate tasks, Proofing and Printing, More useful functions in excel, Goal seek and scenario features, V-lookup and H-lookup functions, Advanced sort and filter in excel.								10	
4.	MS-PowerPoint: Setting up PowerPoint environment, Creating slides and applying themes, Working with bullets and numbering, Working with objects, Hyperlinks and action buttons, Working with movies and sounds, Using SmartArt and Tables, Animation and slide transition, Using slide master, Slide show option, Proofing and Printing.								10	
5	Introduction to Latex: Installation of the software LaTeX, Understanding Latex compilation, Basic Syntax, Writing equations, Matrix, Tables. Page Layout – Titles, Abstract Chapters, Sections, References, Equation references, citation. List making environments, Table of contents, Generating new commands, Figure handling, Numbering, List of figures, List of tables, Generating index.								10	

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

	Packages - Geometry, Hyperref, amsmath, amssymb, algorithms, algorithmic graphic, color, tilez listing. Classes: article, book, report, beamer, slides. IEEtran. Applications - Writing Resume, Writing articles/ research papers, project report.	
6	Internet Ethics & AI tools Working with Internet and-mail, Using the Internet, Internet Ethics and Safety, Social Media. AI Tools: Jasper, GitHub Copilot, Synthesia, Writesonic.	08
TOTAL		56
List of Experiments:		
<ol style="list-style-type: none"> 1. Create a collaborative document project where multiple users contribute to a document using MS Word's track changes and commenting features. 2. To analyze and visualize data effectively using Excel's functions and charts, aiming to create insightful and dynamic data visualizations. 3. Develop a financial modeling project using Excel, incorporating advanced functions like goal seek, scenario analysis, and pivot tables. Build automation using macros for repetitive tasks. 4. Create an interactive multimedia presentation on a complex topic of interest. Incorporate animations, transitions, embedded videos, and interactive elements like hyperlinks and action buttons. 5. Design and implement a digital marketing campaign for a fictitious product or service. Create email newsletters, social media posts, and analyze campaign performance metrics. 6. Prepare research article using Latex. 		
Text Books:

Course Objectives:										
<ol style="list-style-type: none"> 1. To introduce students on professional development skills and its importance in building personal and professional life. 2. To bring in self-awareness and realization of Values, Self-discipline and self-grooming for betterment of life and contribution to our Society. 										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Know their own values and how to use in their career and personal life.									
CO2	Understand the importance of self-discipline and how it can empower individuals to take control of their actions and decision in any situation.									
CO3	Know the importance of self-grooming to maintain good health and self-confidence.									
Course Contents:										
Unit	Description								Duration (Hrs.)	
1.	Values: Understand, Know, Define and Use of your Values, Types of Values, Internal and External Stakeholders, What is SWOT analysis and how to do, Action planning and execution, Self-review.								24	
2.	Self-discipline: Definition, Self-discipline impact in your life and society, Techniques to build self-discipline, Self-review and actions.								16	
3.	Self-grooming: What is personal grooming and its importance, Making Self-care guide and practice, Self-care for health and well-being.								16

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: I			
Course: Liberal Learning – I (Guitar)							Code: ETCC102A			
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)						
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total	
-	02	-	01	-	-	25	-	-	25	
Prerequisites:										
Basic knowledge of Indian classical music and Guitar musical instrument.										
Course Objectives:										
1. To build a strong foundation in Indian classical dance through mastering basic techniques, rhythms, expressions, and repertoire, culminating in a performance.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Illustrate the fundamental aspects of Guitar instrument.									
CO2	Demonstrate the performance of Guitar Instrument.									
CO3	Apply different types Chords.									
CO4	Apply basic outline through various prescribed ragas practically.									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Introduction to the Guitar								2	
2.	Understanding standard tuning								2	
3.	Introduction to tablature and note reading								2	
4.	Introduction to basic music theory concepts								2	
5.	Understanding scale, intervals, and chords								2	
6.	Learning more open chords: D major, D minor, C major, G major								2	
7.	Understanding power chords and their shapes								2	
8.	Understanding barre chord shapes: F major, B minor								2	
9.	Finding Chords by Ear								2	
10.	Chord Progressions								2	
11.	Advanced Chord Types								2	
12.	Transposing Chord								2	
13.	Review and Practice								2	
14.	Introduction to Scales								2

Prerequisites:										
A basic understanding of film theory, Camera operation, Lighting techniques and visual storytelling is essential for cinematography.										
Course Objectives:										
1. To make students effectively use their camera's components, study fundamental photography techniques and apply basic to advanced editing skills.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Illustrate the fundamental aspects of camera equipment.									
CO2	Demonstrate the performance of camera equipment									
CO3	Ability to translate creative concepts into visually engaging and coherent film or video projects.									
CO4	Mastery in crafting compelling visual narratives through camera angles, lighting, and composition									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Introduction to Photography								2	
2.	Understanding camera components (lens, shutter, sensor)								2	
3.	Exposure Triangle								2	
4.	Introduction to the rule of thirds, leading lines, and framing								2	
5.	Understanding autofocus vs. manual focus								2	
6.	Introduction to natural and artificial lighting								2	
7.	White Balance and Color Theory								2	
8.	Motion and Long Exposure								2	
9.	Basics of portrait photography								2	
10.	Basics of landscape photography								2	
11.	Overview of post-processing software (e.g., Adobe Light room, Photoshop)								2	
12.	Introduction to advanced editing tools								2	
13.	Organizing and Storing Photos								2	
14.	Final Project Presentation and Review								2

Prerequisites:										
Good stamina, flexibility and familiarity with simple rhythmic patterns and beats.										
Course Objectives:										
1. To build a strong foundation in Indian classical dance through mastering basic techniques, rhythms, expressions, and repertoire, culminating in a performance.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Understand the fundamental postures, hand gestures and basic steps of Indian classical dance.									
CO2	Understand and perform dance sequences to various rhythmic cycles (Tala) with confidence.									
CO3	Convey emotions and stories through facial expressions (Abhinaya) and body language.									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Overview of Indian Classical Dance								2	
2.	Fundamental Postures and Hand Gestures (Hasta Mudras)								2	
3.	Introduction to Basic Steps (Adavus or Tatkars)								2	
4.	Rhythmic Patterns and Clapping (Tala)								2	
5.	Advanced Basic Steps								2	
6.	Strength and Conditioning								2	
7.	Introduction to Basic Expressions (Abhinaya)								2	
8.	Integrating Steps and Expressions								2	
9.	Intermediate Rhythmic Patterns								2	
10.	Improvisation and Creative Movement								2	
11.	Introduction to Advanced Movements								2	
12.	Review and Feedback								2	
13.	Learning a Simple Dance Piece - Part 1								2	
14.	Learning a Simple Dance Piece - Part 2								2

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: I			
Course: Liberal Learning – I (Rifle and Pistol Shooting)							Code: ETCC102H			
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)						
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total	
-	02	-	01	-	-	25	-	-	25	
Prerequisites:										
Proper health, Basic knowledge of rules of the game.										
Course Objectives:										
1. To develop fundamental skills in rifle and pistol shooting through technical knowledge, practical drills, and mental preparation for competitive performance.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Master fundamental and advanced shooting techniques for both rifle and pistol, including aiming, breathing, and triggering.									
CO2	Develop strong mental focus and relaxation techniques essential for high-performance shooting and competition readiness.									
CO3	Gain hands-on experience in live shooting drills and positional shooting, preparing them for competitive shooting scenarios.									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Introduction about shooting game								2	
2.	Basic technical knowledge								2	
3.	Technique Refinement(aiming, breathing and triggering)								2	
4.	Learning about live shooting and technics								2	
5.	Practicing standard Positional rifle Shooting								2	
6.	Mental Preparation and Focus								2	
7.	Practice and learning session of live shooting(rifle)								2	
8.	Learning about pistol shooting(pistol)								2	
9.	Introduction of pistol positions and dry practice								2	
10.	Practical Shooting Drills (basic)								2	
11.	Learning about live shooting and technics(standing position)								2	
12.	Learning of Concentration, breathing and relaxing exercise for shooting								2	
13.	Introduction of competition level and practice								2	
14.	Final test and oral (rifle and pistol match)								2	
TOTAL								28		
Reference Books:										
1. David Watson, “ABCs of Rifle Shooting”, Gun Digest (Imprint of KP Books), 2014

Prerequisites:										
Proper health, Basic knowledge of rules of the game.										
Course Objectives:										
1. To develop foundational volleyball skills, including serving, passing, setting, spiking, and blocking, while mastering game rules and strategies through practical gameplay and scrimmage.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Demonstrate proficiency in basic volleyball skills such as serving, passing, setting, spiking, and blocking.									
CO2	Apply offensive and defensive strategies effectively, including serve receive and transition play, during gameplay.									
CO3	Understand and implement volleyball rules and referee gestures, applying them accurately during practical gameplay and scrimmages.									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Introduction to Volleyball								2	
2.	Basic Skills - Serving								2	
3.	Basic Skills- Passing								2	
4.	Basic Skills- Setting								2	
5.	Spiking Basics								2	
6.	Blocking Basics								2	
7.	Digging Basics								2	
8.	Serve Receive								2	
9.	Offensive Strategies								2	
10.	Defensive Strategies								2	
11.	Transition Play								2	
12.	Gameplay & Scrimmage								2	
13.	Game Rules , Refree Gestures								2	
14.	Practical								2

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: I		
Course: Indian Knowledge System and Financial Literacy							Code: ETIK101		
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)					
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total
02	-	-	02	-	-	50	-	-	50
Prerequisites:									
Basic knowledge of algebra and mathematical operations.									
Course Objectives:									
<ol style="list-style-type: none"> 1. To facilitate the students with the concepts of Indian traditional knowledge and to make them understand the importance of roots of Indian Knowledge System. 2. To make students proficient in fundamental financial concepts essential for managing personal finances effectively. 3. To equip students with practical budgeting skills to empower them to achieve financial independence. 									
Course Outcomes: After completion of this course, students will be able to -									
CO1	Understand IKS fundamentals, Indian numeral system, and key contributions in mathematics and measurement.								
CO2	Recognize metal working techniques, Vastushastra principles, historical engineering and architecture practices.								
CO3	Understand financial concepts, money types, bank accounts, and essential financial terms for practical application.								
CO4	Manage budgets, credit, loans, and develop financial plans for career and education goals.								
CO5	Understand various investments, risk management, insurance types, and develop retirement planning strategies.								
CO6	Comprehend tax forms, compliance, fraud protection, and financial considerations for investments and business.								
Course Contents:									
Unit	Description								Duration (Hrs.)
1.	<p>Foundations of Indian Knowledge System: Definition and scope of IKS, Historical development and significance.</p> <p>Number System and Units for Measurement: Salient features of the Indian numeral system, The discovery of zero and its importance, Decimal Systems, Measurement of time, distance and weight.</p> <p>Mathematics: Unique aspects of Indian mathematics, Great mathematicians and their significant contributions in the area of arithmetic, algebra, geometry, trigonometry, binary mathematics.</p>								5
2.	<p>Application of Indian Knowledge System: Metals and Metal Working: Mining and ore extraction, Extraction of iron from Biotite by indigenous techniques, Lost wax casting of idols and artefacts, Architecture and Structures: Vastushastra, Unitary buildings and Town planning, Temple architecture. Physical structures in India, Irrigation and water management</p>								5

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

3.	Finance: Importance of Financial Literacy for Engineers, Understanding Money, Types of Money- Cash, Cheque, UPI Payment, Digital Currency, etc Types of bank accounts - saving, salary, current, loan, etc., Basic financial Terms- Income, Expenditure, Balance, saving, loan, interest rates, compound interest rate, credit, Investment, Taxes	4
4.	Financial Planning: Personal budgeting, Understanding debit and credit card, credit score, Types of credit card, credit card payment cycle, Barrowing, Loans / Debts, Types of loans, Terms of barrowing, Loan, Interest rate, Principal, EMI, EMI Calculation, Repayment of loan/debt strategy, Financial Planning for Career Development, Higher studies,	5
5.	Investment and Wealth Management: Basics of Investing, Effect of compounding, Types of Investment (fixed deposit, recurring deposits, Insurance policies, Bonds, Mutual Funds, Stocks, real estate, etc.) Risk and Return, Concept of SIP, STP and SWP, Stock Market, Stock Exchanges, reading of stock market indices, Life insurance, healthcare insurance, vehicle insurance, Importance of early retirement planning, Investment strategy, Pension Plan, Portfolio management,	5
6.	Finance Compliance: Types of Taxes, Types of Income Tax return form and Filling, Taxes and reforms, Impact of taxation policy on Investment, Scams and Frauds, Protection of personal information, Financial consideration for starting business, Real estate and purchase	4

SYLLABUS

SEMESTER - II

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: II		
Course: Engineering Mathematics - II							Code: ETBS203		
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)					
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total
03	-	-	03	40	60	-	-	-	100
Prerequisites:									
Basic concept of Differentiation, Integration and Vector.									
Course Objectives:									
<ol style="list-style-type: none"> 1. To introduce student some methods to find the solution of first order & first degree ordinary differential equations with its applications. 2. To make students familiar with vector differentiation. 3. To acquaint the student with mathematical tools needed in evaluating improper integrals, multiple integrals and their usage. 									
Course Outcomes: After completion of this course, students will able to -									
CO1	Solve first order ordinary differential equation.								
CO2	Apply differential equation in engineering applications.								
CO3	Determine the velocity vector, gradient, divergence, curl.								
CO4	Evaluate improper integrals.								
CO5	Demonstrate multiple integrals for regions in the plane.								
CO6	Use of multiple integrals to find area bounded by curves & volume bounded by surfaces.								
Course Contents:									
Unit	Description								Duration (Hrs.)
1.	First Order Ordinary Differential Equation: Exact differential equations, Equations reducible to exact form. Linear differential equations, Equations reducible to linear form and Bernoulli's equation.								7
2.	Applications of Differential Equations: Applications of differential equations to orthogonal trajectories, Newton's law of cooling, Kirchhoff's law of electrical circuits, Rectilinear motion, Simple harmonic motion, One dimensional conduction of heat.								7
3.	Vector Differential Calculus: Velocity vector, acceleration vector, tangential and normal component of acceleration, Vector differential operator, gradient, directional derivatives, angle between surfaces, Divergence and curl, solenoidal and irrotational field								7
4.	Integral Calculus: Reduction formulae, Beta and Gamma functions, Differentiation under integral sign and Error functions.								7
5.	Multiple Integrals: Double integration in Cartesian & polar coordinates, Change of order of integration, Triple integral in Cartesian & polar coordinates.								7
6.	Applications of Multiple Integral: Applications to find Area, Volume, Mass, Centre of gravity and Moment of inertia.								7
TOTAL								42

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: II			
Course: Engineering Chemistry							Code: ETBS204			
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)						
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total	
02	02	-	03	40	60	25	-	-	125	
Prerequisites:										
Basic knowledge of volumetric analysis, structure property relationship, classification and properties of polymers, electromagnetic radiation, electrochemical series.										
Course Objectives:										
<ol style="list-style-type: none"> 1. To familiarize the students with the basic phenomenon/concepts of chemistry and its applications in various fields of Engineering. 2. To impart knowledge of technologies involved in water analysis to improve water quality. 3. To learn significance science of corrosion and preventive methods used for minimizing corrosion. 4. To understand structure, properties and applications of speciality polymers and nanomaterials. 										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Analyze water softening parameters.									
CO2	Utilize different analytical methods for analysis of various chemical compounds.									
CO3	Understand the mechanism of destruction of metals (corrosion) and effective preventive measures.									
CO4	Explore the knowledge of advanced engineering materials for various engineering applications.									
CO5	Analyze fuel and suggest use of alternative fuels.									
CO6	Familiarize with classification, properties and applications of nanomaterials.									
Course Contents:										
Unit	Description								Duration (Hrs.)	
1.	Water Technology: Introduction, Chemical Analysis of Water- Hardness; Temporary and Permanent, Alkalinity (Hydroxide, Carbonate and Bicarbonate), Softening Methods: Zeolite and Demineralization Process, Water Purification: Reverse Osmosis. Simple Numerical on Hardness Determination and Alkalinity Calculation.								5	
2.	Instrumental Methods of Analysis: Types of analysis: Quantitative and Qualitative analysis Introduction, Instrumentation and Applications of following methods: Colorimetry, pHmetry (Titration of Strong acid versus Strong base), Conductometry (Titration of Strong acid versus Strong base)								5	
3.	Corrosion Science: Introduction, Types of Corrosion-Dry and Wet corrosion, Wet Corrosion Mechanism: Hydrogen Evolution and Oxygen Absorption, Factors affecting rate of corrosion. Methods of prevention of corrosion: Cathodic Protection (Sacrificial Anode), Anodic Protection (Anodizing), Methods to apply Metallic Coatings-Hot dipping, Electroplating.								4	

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

4.	<p>Engineering Polymers: Polymers: Introduction, Definition of Polymer, Monomer and Functionality of monomers Speciality Polymers: Introduction, Preparation, Properties and Applications of the following polymers: 1. Engineering Thermoplastic: Polycarbonate 2. Conducting Polymer: Polyacetylene Polymer Composites: Introduction, Constituents of composite, Advantages over conventional materials, Applications, Fiber Reinforced Plastic (FRP)-Glass reinforced and Carbon reinforced.</p>	5
5.	<p>Fuels and Combustion: Introduction, Calorific value - Definition, Gross and Net calorific value, Determination of Calorific value: Principle, Construction and Working of Bomb Calorimeter (Simple Numerical), Solid fuel: Coal: Analysis of Coal-Proximate (Simple Numerical). Alternate fuels: Biodiesel and Power alcohol. Hydrogen as future fuel: Production, Advantages, Storage and Applications in Hydrogen fuel cell.</p>	5
6.	<p>Nanomaterials: Introduction, Classification of Nanomaterials Based on Dimensions, Nanoscale materials: Structure, Properties and Applications of Graphene and Quantum dots (semiconductor nanoparticles), Importance of Nanotechnology in engineering applications.</p>	4
TOTAL		28
List of Experiments:		
A. Lab Experiments (Any Seven)		
<ol style="list-style-type: none"> 1. Determination of hardness of water by EDTA method. 2. Determination of alkalinity of water. 3. Determination of strength of strong acid using pH meter. 4. Determination of maximum wavelength of absorption of $\text{CuSO}_4/\text{FeSO}_4/\text{KMnO}_4$, verify Beer's law and find unknown concentration of given sample. 5. Titration of a mixture of strong acid with strong base using Conductometer. 6. Preparation of phenol-formaldehyde/urea-formaldehyde resin. 7. Proximate analysis of coal. 8. Coating of copper or zinc on iron plate using electroplating. 9. Determination of the molecular weight of a polymer by using Ostwald's Viscometer. 		
B. Demonstration (virtual) (Any One)		
<ol style="list-style-type: none"> 10. Demonstration of effect of environmental conditions on metal by weight loss method. 11. Synthesis of oxide nanoparticles. 		
C. Mandatory visit to chemical industry/research laboratory/water treatment plant.

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: II		
Course: Basic Electrical Engineering							Code: ETES203		
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)					
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total
03	02	-	03	40	60	25	-	-	125
Prerequisites:									
Fundamental Electrical Concepts, Familiarity with Electrical Units & basic safety precautions.									
Course Objectives:									
Course Objectives:									
<ol style="list-style-type: none"> 1. To familiarize students with the fundamentals of Electrical Engineering. 2. To make students aware about the functioning of electrical machines, batteries and their applications. 3. To introduce students to the components of low-voltage electrical installations and the methodology for estimating energy bills. 									
Course Outcomes: After completion of this course, students will be able to -									
CO1	Understand work, power, and energy relationships, unit conversions, and Lead Acid and Lithium-Ion battery charging/discharging processes.								
CO2	Analyze simple resistive circuit powered by DC supply using circuit theorems.								
CO3	Interpret voltage, current, phase relationship for RLC loads.								
CO4	Examine voltage, current and power relationships in star and delta AC circuits, including protection systems.								
CO5	Explain operational principle of transformer, DC machines and induction motor.								
CO6	Estimate the energy bill for domestic consumers.								
Course Contents:									
Unit	Description								Duration (Hrs.)
1.	<p>Work, Power and Energy and Batteries:</p> <p>Basic Definition and Units: Length, Mass, Time, Temperature, Area, Volume, Acceleration, Density, Velocity, Pressure, Work, Energy, Torque, Power, Voltage, Current, Resistance, Capacitance, Conductance, Charge, Inductance, Frequency, Impedance etc., Multiples and Submultiples, Types of units (MKS, CGS and SI), Unit conversions.</p> <p>Work, Power and Energy: Effect of temperature on resistance, resistance temperature coefficient (derivation and numerical), insulation resistance of single core cable (derivation and numerical), conversion of energy from one form to another in electrical, mechanical, and thermal systems.</p> <p>Batteries: Lead acid and Lithium Ion battery – (Construction, working, charging and discharging and its applications), concept of depth of charging, state of charge of battery, battery capacity, battery efficiency, ampere-hour and watt-hour of battery, maintenance of batteries, and series-parallel connection of batteries.</p>								7
2.	<p>DC Circuits: Analysis of series and parallel circuits, KVL and KCL (statement, sign convention), ideal and practical voltage and current sources, simple mesh and node analysis, source transformation (simple numerical), star-delta transformation (simple</p>								7

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

	numerical), Superposition and Thevenin's theorem (Statement and numerical - only for independent sources, and resistive circuit).	
3.	AC Circuits (Single phase circuits): Generation of sinusoidal voltage, representation of sinusoidal waveforms, concept of cycle, period, frequency, instantaneous, peak, average, and RMS values, Lagging, leading and in phase quantities and their phasor representation, Rectangular and polar representation of phasors, Concept of real, reactive, apparent, complex power and power factor, Analysis of single-phase AC series circuit (pure R, L, C and series R-L, R-C, and R-L-C combinations), Concept of impedance, admittance, voltage-current, power waveforms and relevant phasor diagrams for different combinations.	7
4.	AC Circuits (Three-phase circuit) and Electrical Installations: AC Circuits (Three-phase circuit): Concept of three-phase supply and phase sequence, Three-phase balanced circuits, voltage and current relations in star and delta connections, and power calculations. Electrical Installations: Components of LT Switchgear: Fuse, MCB, MCCB (working, advantages, disadvantages and applications), Earthing - (Definition, importance of earthing, types, advantages of earthing, difference between earthing and neutral).	7
5.	Single Phase Transformer: Construction, working principle and EMF equation of transformer, Ideal and practical transformer, Losses, Types of transformers (Step up and step-down transformer), Concept of voltage regulation and efficiency (simple numerical), Introduction to auto-transformer (Construction, working, advantages and applications). Electricity Bill: Power rating of household appliances, Definition of "unit" used for consumption of electrical energy, Two-part electricity tariff, Calculation of electricity bill for domestic consumers.	7
6.	DC Machines: DC generator and motor (Construction, working principle, types, and applications), emf equation of DC generator, (Simple numerical). Voltage expression of generator and motor (Simple numerical), Concept of back-emf (simple numerical), Armature and shaft torque equation (only descriptive treatment). AC Machines: Constructional features, working principle of three-phase induction motor, types (squirrel cage and slip ring), concept of synchronous speed, rotor speed, slip, power stages in three phase induction motor, concept of torque equation of three phase induction motor, torque-slip characteristics, industrial applications of induction motor.	7
TOTAL		42

List of Experiments:

Group A: Minimum SIX experiments from following list

1. Demonstration of measurement of various units and their conversions.
2. Measurement of insulation resistance of electrical equipment/cable using Megger.
3. Verification of Superposition theorem with DC supply using hardware.
4. Verification of Thevenin's theorem with DC supply using hardware.
5. Measurement of steady state response of series RL and RC circuits on AC supply and observations of voltage and current waveforms on storage oscilloscope.
6. Verification of relation between phase and line quantities in three-phase balanced star and delta connections of load.

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

7. Demonstration of different types of electrical protection equipment such as fuses, MCB, MCCB and earthing system.
8. Calculation of efficiency and voltage regulation of single-phase transformer by direct loading test.
9. Demonstration of cut-out sections of machines: DC machine (commutator-brush arrangement), Induction machine (squirrel cage rotor).
10. Analysis of LT electricity bills and energy conservation (Case study).

Group B: DIY Models – Any TWO, from following list or any other suitable model

11. Demonstration of fundamental laws of Electrical Engineering using breadboard – (a) Ohm's Law (b) Faraday's law of Electromagnetic Induction (c) Kirchoff's laws (KCL and KVL).
12. Generation of power with magnets and copper wire.
13. Conversion of mechanical energy to electrical energy and vice versa.
14. Model of mutual induction in transformer.

Group C: A mandatory visit to any transformer/electrical machines manufacturing industry.

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)								Semester: II	
Course: Sensors and Actuators								Code: ETES204	
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)					
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total
02	02	-	03	40	60	25	-	-	125
Prerequisites:									
Basic Electronics Engineering									
Course Objectives:									
<ol style="list-style-type: none"> 1. To introduce the basic concepts and differences between sensors and transducers, emphasizing their importance in various applications. 2. To explore the classification, principles of operation, construction details, and characteristics of different types of transducers and sensors. 3. To provide knowledge on the practical applications and selection criteria for various sensors, transducers, and actuators in real-world scenarios. 									
Course Outcomes:- After completion of this course, students will be able to -									
CO1	Identify types and applications of various sensors and transducers effectively.								
CO2	Classify active and passive transducers based on their operating principles and applications.								
CO3	Explain types, construction, and operation of EMR, SSR, hybrid relays, and their applications.								
CO4	Differentiate between types of cables like co-axial, fiber, armoured, and their respective applications.								
CO5	Describe the definition and types of actuators including linear, rotary, and electromechanical actuators.								
CO6	Describe pneumatic, mechanical, and hydraulic actuators, their construction, characteristics, and selection criteria.								
Course Contents:									
Unit	Description								Duration (Hrs.)
1.	Sensors: Introduction, Types of Sensor & Transducers, Difference between sensors and transducers Application. selection factors of Transducers. Smoke Sensor, Gas Sensor, Temperature Sensor (Thermocouple, RTD), LDR, IR sensor, Ultrasonic Sensor.								4
2.	Transducers: Active Vs passive, Classification of Transducers On Principle of operation, construction details, characteristics and applications of Photovoltaic cell, Piezoelectric, Tacho Generator, potentiometer, Strain Gauges, LVDT, Capacitor microphone, capacitive pressure sensor, proximity sensor.								6
3.	Relays: Introduction of Relay, Types of Relay (SPST, SPDT, DPST, DPDT), Construction & Operation of EMR (Electromechanical Relay), SSR (Solid state relay), Hybrid Relay, Application of Relays.								4
4.	Cables:								4

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

	Types of Cables, Co-axial, Fiber cable, Armored Cable, Ethernet Cable, Applications.	
5.	Actuators: Definition, Actuators, Linear, rotary, Electro mechanical Actuators (Servo, stepper, Piezoelectric).	4
6.	Fluid actuators Pneumatic actuator, Mechanical actuating system, Hydraulic actuator, Construction, Characteristics and Types, Selection criteria.	6

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: II		
Course: Electronics Devices and Circuits							Code: ETPC201		
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)					
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total
02	02	-	03	40	60	25	-	-	125
Prerequisites:									
Basic Electronics Engineering, Electronics circuit building.									
Course Objectives:									
<ol style="list-style-type: none"> 1. To grasp the concept of H-parameters (Hybrid parameters) used for modeling transistor amplifiers. 2. To equip students with the knowledge to analyze and design various types of voltage regulators, including linear and switching regulators, and understand their features, specifications, and applications. 3. To recognize the importance of filters in power supply circuits for smoothing and regulation. 									
Course Outcomes: After completion of this course, students will be able to -									
CO1	Design voltage amplifiers using H-parameter models for various transistor configurations								
CO2	Explain the effects of feedback and differentiating between voltage series and current series feedback configurations.								
CO3	Analyze various voltage regulator circuits, including shunt regulators with Zener diodes and BJTs								
CO4	Develop a design for a regulated power supply incorporating filters to improve output stability.								
CO5	Analyze the design to evaluate its performance parameters such as gain, bandwidth, and stability.								
CO6	Explain the function of each component in the PLL block diagram.								
Course Contents:									
Unit	Description								Duration (Hrs.)
1.	Voltage Amplifier: H-Parameters, Hybrid model for transistor (CE, CB& CC configuration), Generalized H-parameter analysis of transistor amplifier for Voltage Gain, Current gain, input resistance & Output resistance taking R_s into account, approximate H-parameter model for CE, CB & CC. Classification of voltage amplifiers, Detailed study of Single stage RC coupled amplifier & Emitter follower.								6
2.	MOSFET Circuit: Four types of feedback amplifiers, Effects of feedback, Voltage series & current series feedback amplifiers, CMOS inverter.								4
3.	Voltage Regulators: Need of voltage regulator, Stabilization factors, Analysis & Design of Shunt regulator (using Zener diode & BJT), series voltage regulator (using BJT) Series voltage regulator with Pre- regulator & Overload protection circuit.								4

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

4.	Rectifiers and Filters: Rectifiers: Half wave, full wave: center tap and bridge type, analysis for different Parameters: PIV, TUF, efficiency, ripple factor, regulation, etc. Filters: Need of Filters: LC, CLC, and Analysis for ripple factor and regulation. Design of unregulated power supply with and without filter.	4
5.	Feed-Back Amplifiers: General theory of feedback, reasons for negative feedback. Types of negative feedback in transistor circuits: Voltage series, Current series, Voltage shunt, Current shunt feedback amplifiers, Darlington pair, Darlington amplifier using bootstrapping principle, (Numerical are expected) Design of Voltage series feedback amplifier	6
6.	Op-Amp Applications: PLL: Block Diagram, Characteristics, phase detectors, Details of PLL IC 565 Applications, Typical circuits	4
TOTAL		28

List of Experiments:

Note: Minimum 8 experiments are required.

1. Design & analysis of Half wave rectifier (HWR) with & without filter by calculating performance parameters
2. Design & analysis of Full wave rectifier (FWR) with & without filter by calculating performance parameters.
3. Design & analysis of Bridge rectifier with & without filter by calculating performance parameters
4. Determination of H-parameters from transistor CE characteristics.
5. Calculation of performance parameters (A_v , A_i , R_i , R_o) for single stage RC coupled amplifier
6. Study of Frequency response of single stage RC coupled amplifier.
7. Design & analysis of Zener shunt regulator
8. Design & analysis of Transistorized shunt regulator
9. Design & analysis of series pass regulator with & without pre- regulator.
10. Simulation of Half Wave and Full Wave Rectifier Circuit
11. Simulation of RC Coupled Amplifier Circuits.
12. Simulation of shunt regulator using Zener diode.

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: II			
Course: Skill-Building with Arduino							Code: ETVS202			
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)						
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total	
-	04	-	02	-	-	25	-	-	25	
Prerequisites:										
Basic Electronics Engineering, Electronics Circuit Design.										
Course Objectives:										
<ol style="list-style-type: none"> 1. To provide students with a thorough understanding of the Arduino platform, including its types, features, and the necessary software tools for programming and development. 2. To teach students the basics of Arduino programming using Embedded C, including digital and analog input/output handling, LCD interfacing, and serial communication. 3. To enable students to design and implement practical applications such as home automation and IoT projects using Arduino, focusing on program testing and device integration. 										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Distinguish between digital and analog signals, provide examples of each, and understand their significance in communication methods.									
CO2	List various digital and analog sensors and output devices, and understand how to program and interface them with Arduino for practical applications.									
CO3	Learn to install and use the Arduino IDE, understand the structure of Arduino programming using Embedded C, and effectively utilize control structures in their projects.									
CO4	Write a program for analog devices, measure parameters like room temperature, and perform calibration of sensors to ensure accurate readings.									
CO5	Explain the principles of serial communication, program Arduino for serial transmission and reception, and implement practical examples like sending and receiving data via Bluetooth.									
CO6	Learn the concepts of home automation and IoT, identify the necessary devices, and develop simple IoT structures using Arduino, focusing on program testing and integration.									
Course Contents:										
Unit	Description								Duration (Hrs.)	
1.	Input and Out Devices: Digital Signal and its Example, Analog Signal and its Example, Types of communication Methods, Digital Sensors List, Analog Sensors List, Output Devices List, Serial Communication Devices List								8	
2.	Arduino Programming Basics: Introduction to C programming, What Is Embedded C, Why we Choose Embedded C, Arduino programming Structure, Control Structure in Arduino, Types Of Arduino and its Features, How to choose Arduino IC's, Software Required For Arduino, Arduino IDE Installation.								8	
3.	Arduino Digital Input/output Handling: List of Digital Input/output devices, how to program for Digital Input devices, Example: Get input from Keypad, how to Program for Digital Output devices,								8	

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

	Example: LED controlling, Arduino LCD Interfacing - LCD Display Pinout, Display the Static Data, Display the Dynamic Data.	
4.	Arduino Analog Input and Calibration: List of Analog Sensors, How to Program for Analog Devices, Example: Measuring Room Temperature, What is Calibration?, Calibrate the Temperature sensor	8
5.	Arduino Serial Communication: List of Serial Communication Devices, How to program for Serial Transmission, Example: Send Data to Mobile via Bluetooth, How to program for Serial Receiving, Example: Receive Date from Mobile via Bluetooth	12
6.	Home Automation Using Arduino: What is Home Automation?, Devices Used in home automation, Program Testing, Simple IOT structure Using Arduino What is IOT, Devices Used in IOT, Program Testing	12
TOTAL		56

List of Experiments

1. Introduction about Arduino Uno kit.
2. Introduction about IDE Software.
3. Controlling the Light Emitting Diode (LED) with a push button.
4. Interfacing the RGB LED with the Arduino Uno.
5. Controlling the LED blink rate with the potentiometer interfacing with Arduino Uno.
6. Detection of the light using photo resistor.
7. Interfacing of temperature sensor LM35 with Arduino Uno.
8. Interfacing Servo Motor with the Arduino Uno.
9. Interfacing of the Active Buzzer with Arduino Uno.
10. Interfacing of the Relay with Arduino uno.
11. Building Intrusion Detection System with Arduino and Ultrasonic Sensor.
12. Directional Control of the DC motor using Arduino Uno.

Note: The term work marks will be based on experiments and project.

Project:

Here are some guidelines to consider when planning and executing IoT projects:

- 1) Define Clear Objectives
- 2) Select Appropriate Technology
- 3) Design for Scalability
- 4) Ensure Data Security
- 5) Consider Interoperability
- 6) Focus on User Experience
- 7) Optimize Power Efficiency
- 8) Comply with Regulations
- 9) Test and Validate
- 10) Plan for Maintenance and Updates
- 11) Document and Share Knowledge
- 12) Engage Stakeholders

Prerequisites:										
Basic knowledge of Indian classical music in singing.										
Course Objectives:										
1. To develop advanced singing techniques and ear training through Indian classical music, focusing on repertoire selection, effective rehearsal, and performance presentation.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Master legato, staccato, and advanced vocal methods in Indian classical music.									
CO2	Improve musical ear through rigorous training and diverse classical repertoire.									
CO3	Apply effective rehearsal strategies to prepare and present a polished performance.									
CO4	Deliver a well-executed performance of selected Indian classical pieces with artistic expression									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Vibrato and Ornamentation.								2	
2.	Range Extension.								2	
3.	Legato and Staccato.								2	
4.	Advanced Ear Training.								2	
5.	Basics of Indian Semi Classical Music.								2	
6.	Improvisation Techniques.								2	
7.	Selecting Repertoire for Performance.								2	
8.	Rehearsal Techniques.								2	
9.	Dress Rehearsal.								2	
10.	Final Performance.								2	
11.	Performance Review.								2	
12.	Exploring New Repertoire.								2	
13.	Advanced Techniques and Styles.								2

Prerequisites:										
A basic understanding of film theory, Camera operation, Lighting techniques and visual storytelling is essential for cinematography.										
Course Objectives:										
1. To master videography by learning camera techniques, shooting methods, and editing, culminating in a final project showcasing advanced skills in video production.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Operate camera components and techniques for steady, sharp video shooting.									
CO2	Apply rule of thirds, framing, and stabilization methods effectively.									
CO3	Use advanced editing tools and sound design for polished video projects.									
CO4	Deliver a comprehensive final video project demonstrating learned skills.									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Introduction to Videography								2	
2.	Understanding camera components (lens, sensor, viewfinder)								2	
3.	Techniques for steady shooting (tripods, handheld, gimbals)								2	
4.	Understanding the rule of thirds, leading lines, and framing in video								2	
5.	In-depth explanation of the exposure triangle: aperture, shutter speed, and ISO								2	
6.	Importance of audio in videography								2	
7.	Techniques for achieving sharp focus								2	
8.	Motion and Stabilization								2	
9.	Storyboarding and Planning								2	
10.	Filming Techniques								2	
11.	Introduction to Video Editing								2	
12.	Introduction to advanced editing tools (color correction, audio editing, effects)								2

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: II			
Course: Liberal Learning – II (Synthesizer/Keyboard)							Code: ETCC204E			
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)						
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total	
-	02	-	01	-	-	25	-	-	25	
Prerequisites:										
Basic knowledge of Indian classical music and Keyboard musical instrument.										
Course Objectives:										
1. To develop advanced musical skills through complex progressions, improvisation, and composition, culminating in a polished performance and mastery of selected repertoire.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Apply complex chord progressions and advanced scales effectively in performance.									
CO2	Demonstrate proficiency in improvisation and advanced chord voicings.									
CO3	Perform selected repertoire with refined technique and stage presence.									
CO4	Successfully showcase learned skills through a polished recital or performance.									
Course Contents:										
Unit	Description								Duration (Hrs.)	
1.	Introduction to more complex progressions (e.g., ii-V-I)								2	
2.	Basics of improvisation								2	
3.	Learning advanced scales (e.g., blues scale, pentatonic scale)								2	
4.	Learning advanced chord voicings and inversions								2	
5.	Advanced Arpeggios and Runs								2	
6.	Basics of composing music								2	
7.	Initial practice on selected repertoire								2	
8.	Focused practice on repertoire pieces								2	
9.	Understanding stage presence and performance techniques								2	
10.	Final adjustments and practice on repertoire								2	
11.	Attending or reviewing a masterclass								2	
12.	Receiving personalized feedback on playing								2	
13.	Dress rehearsal for recital or performance								2	
14.	Showcasing learned skills and pieces								2

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: II			
Course: Liberal Learning – II (Basketball)							Code: ETCC204F			
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)						
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total	
-	02	-	01	-	-	25	-	-	25	
Prerequisites:										
Proper health, Basic knowledge of rules of the game.										
Course Objectives:										
1. To master advanced basketball skills, strategies, and mental conditioning to excel in team play, complex scenarios, and tournament preparation.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Demonstrate mastery of advanced dribbling, passing, shooting, and defensive techniques.									
CO2	Apply complex defensive systems, advanced team play, and game strategies in mixed scenarios.									
CO3	Develop the mental toughness, conditioning, and strategic insights needed for successful tournament performance									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Advanced Dribbling Techniques								2	
2.	Advanced Passing Techniques								2	
3.	Advanced Shooting Techniques								2	
4.	Advanced Defense Techniques								2	
5.	Position Specific Training								2	
6.	Conditioning & Strength Training								2	
7.	Mental Toughness & Focus								2	
8.	Advance Team Play								2	
9.	Complex Defensive System								2	
10.	Mixed Scenarios & Situational Drills								2	
11.	Tournament Preparation								2	
12.	Advance Game Play & Strategy								2	
13.	Mastery & Final Assessment								2	
14.	Final Scrimmage								2

Prerequisites:										
Proper health, Basic knowledge of rules of the game.										
Course Objectives:										
1. To develop advanced cricket skills and strategies in batting, bowling, and fielding, with a focus on mental conditioning, tactical execution, and competitive performance through intensive practice and match simulations.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Demonstrate advanced techniques in batting, bowling, and fielding, including targeted drills and intensive practice.									
CO2	Apply batting and bowling strategies, and execute tactical plans during match simulations and competitive play.									
CO3	Develop strong mental conditioning and teamwork skills, preparing for high-performance in competitive matches and final assessments.									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Batting Strategies.								2	
2.	Bowling Strategies.								2	
3.	Fielding Strategies.								2	
4.	Match Simulations and Tactical Execution.								2	
5.	Targeted Skill Improvement.								2	
6.	Mental Conditioning.								2	
7.	Intensive Match Simulations.								2	
8.	Advanced Batting Drills.								2	
9.	Advanced Bowling Drills.								2	
10.	Fielding and Wicket keeping in Game Conditions.								2	
11.	Game Analysis and Strategy Sessions.								2	
12.	Final Skill Polishing.								2	
13.	Teamwork and Communication.								2	
14.	Competitive Matches and Final Assessments.								2

-	02	-	01	-	-	25	-	-	25	
Prerequisites:										
Proper health, Basic knowledge of rules of the game.										
Course Objectives:										
1. To achieve advanced proficiency in rifle shooting through specialized training, technical refinement, and mental preparation for competitive performance.										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Master advanced rifle shooting techniques and positions to achieve higher scores.									
CO2	Develop strong mental preparation and focus techniques for peak performance and overcoming technical hurdles.									
CO3	Gain specialized training and match practice, preparing them for ISSF events and advanced shooting challenges.									
Course Contents:										
Sr. No.	Description								Duration (Hrs.)	
1.	Understand and learning about advance rifle position								2	
2.	Advance technical knowledge								2	
3.	Advance Technique Refinement								2	
4.	Learning about advance shooting and technics for achieving score								2	
5.	Specialized Training								2	
6.	Mental Preparation and Focus								2	
7.	Peak Performance and analyses								2	
8.	Advanced Skills Development								2	
9.	Tactical Applications and working about single shoot								2	
10.	Advanced Challenges and Readiness								2	
11.	Review and Consolidation								2	
12.	Focus on technical and mental hurdles								2	
13.	Person to person attention								2	
14.	Match practice and preparation as per ISSF event								2

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

Program: B. Tech. (Electronics and Telecommunication Engineering)							Semester: II			
Course: Internship – I							Code: ETIN201			
Teaching Scheme (Hrs/week)				Evaluation Scheme (Marks)						
Lecture	Practical	Tutorial	Credit	CIE	ETE	TW	OR	PR	Total	
-	-	-	02	-	-	25	-	-	25	
Preamble:										
<p>Internships serve as vital educational and career development experiences, offering practical exposure in a specific field. Employers seek individuals who possess the necessary skills and an understanding of industry environments, practices, and cultures. This internship is designed as a structured, short-term, supervised training program, often centered on specific tasks or projects with clear timelines. The primary goal is to immerse technical students in an industrial setting, providing experiences that cannot be replicated in the classroom. This exposure aims to develop competent professionals who understand the social, economic, and administrative factors influencing the operations of industrial organizations.</p>										
Course Objectives:										
<ol style="list-style-type: none"> 1. To exposure to students to the industrial environment, which cannot be provided in the classroom and hence creating deployable professionals for the industry. 2. To learn to implement the technical knowledge in real industrial situations. 										
Course Outcomes: After completion of this course, students will be able to -										
CO1	Gain exposure to industry practices and understand how academic concepts are applied in professional settings.									
CO2	Develop and demonstrate effective communication and teamwork skills within a work environment.									
CO3	Improve your problem-solving and time management skills by working in real-world industry settings.									
Internship Requirements										
<ol style="list-style-type: none"> 1. Internship Duration: It is mandatory for all students to undergo an internship after every semester during vacations for the duration of 3 to 5 weeks. Internships completed during this period will be considered for the assessment of Term Work (TW). 2. Internship Opportunities: Students can explore various opportunities for internships at: <ol style="list-style-type: none"> a. Industries b. Research labs or organizations c. Collegiate clubs d. In-house research projects e. Online internships 3. Support and Assistance: Students can seek assistance for securing internships from: <ol style="list-style-type: none"> a. The Training and Placement cell, along with departmental coordinators b. Department or institute faculty members c. Personal contacts d. Directly connecting with industries or organizations 4. Request Letter: Once an industry, research organization, or collegiate club is identified, students must obtain a request letter from the concerned department or placement office. This letter, in the 										

DEPARTMENT OF ELECTRONICS AND TELECOMMUNICATION ENGG

standard format must be duly signed by the authority, should be addressed to the HR manager or relevant authority.

5. **Confirmation Letter:** Students must submit the confirmation letter from the industry, research organization, or collegiate club to the Internship Coordinator and the Head of Department (HOD) office.
6. **Joining Report:** Upon commencing the internship, students must submit the joining report, joining letter, or a copy of the confirmation email to the Internship Coordinator and the HOD office.
7. **Faculty Mentor:** A faculty member will be assigned as a mentor to a group of students. The mentor will be responsible for monitoring, evaluating, and assessing student internship activities. The faculty mentor is also required to visit the internship location and submit formal feedback to the Internship Coordinator.
8. **Faculty Visits:** Faculty members are advised to visit the internship site once or twice during the internship period to monitor progress.
9. **Progress Report:** Students must submit progress report fortnightly to their faculty guide and the final internship report to the Internship Coordinator and department office.
10. **Evaluation Report:** After the completion of the internship, the mentor, along with the assessment panel members, should submit the evaluation report of the students to the department office and the Internship Coordinator.
11. **Internship Certificate:** Students must receive the Internship Certificate from the industry and submit it to the Internship Coordinator and department office.
12. **Presentation and Assessment:** Students are required to give a presentation on their internship work as part of the term work. The internship diary and report will also be verified and assessed.
