Zeal Education Society's

ZEAL COLLEGE OF ENGINEERING & RESEARCH, PUNE – 41

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

*NAAC Accredited with **A+** Grade / ISO 21001:2018*

DEPARTMENT OF COMPUTER ENGINEERING

Curriculum Structure and Syllabus of

F.Y. B. Tech. – Computer Engineering

(With effect from - Academic Year 2026 - 27)
(2026 Pattern)

VISION OF THE INSTITUTE

To be a premier institute in technical education by imparting academic excellence, research, social and entrepreneurial attitude.

MISSION OF THE INSTITUTE

- To achieve academic excellence through innovative teaching and learning process.
- To imbibe the research culture for addressing industry and societal needs.
- To inculcate social attitude through community engagement initiatives.
- To provide conducive environment for building the entrepreneurial skills.

DEPARTMENT OF COMPUTER ENGINEERING

VISION:

To emerge as a department of repute in Computer Engineering through innovative teaching, research, social responsibility, and entrepreneurial skills, developing responsible IT professionals.

MISSION:

M1: To provide in-depth technical education and hands-on experiences in Computer engineering using modern tools and technologies
M2: To end eavor innovative research culture to fulfill the needs of Industry and Society.
M3: To instill in students a deep sense of social responsibility.
M4: To strengthen collaboration between industry and academia, fostering the development of entrepreneurial skills among the students.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs):

PEO1: Graduates will apply knowledge of computer engineering to solve complex engineering problems, propose algorithmic solutions, thus establishing themselves as successful IT professional.
PEO2: Graduates will exhibit leadership qualities and innovative thinking, contributing to the development of cutting-edge solutions and career advancements in the field of computer engineering through research, collaborate team work and entrepreneurial initiatives.
PEO3: Graduates will maintain ethics, meet societal duties and pursue life-long learning to stay updated and contribute meaningfully to their field and the society.

PROGRAM OUTCOMES (POs):

PO1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4).
PO3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
PO4: Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).

PO5: Engineering Tool Usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)

PO6: The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment.

PO7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)

PO8: Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.

PO10: Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

PO11: Life-Long Learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

PROGRAM SPECIFIC OUTCOMES (PSOs):

PSO1: Identify, formulate and analyze real-life mechanical engineering problems by applying the principles of thermal, design, manufacturing, interdisciplinary and allied engineering.

PSO2: Select and apply appropriate materials, metallurgical processes, measurement techniques, feedback control systems, hydraulic and pneumatic control systems to develop appropriate solutions to mechanical engineering problems.

PSO3: Select and apply appropriate manufacturing technologies and tools, and develop competencies for working in manufacturing and allied industries.

PSO4: Apply acquired knowledge, skills, and hands-on experiences to work professionally in mechanical and related systems.

SYLLABUS

SEMESTER - I

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** I		
Course: Engineering Mathematics - I							**Code:** 26COBS101		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
03	-	-	03	40	60	-	-	-	100

Prerequisites:

Basic concept of Differentiation, Integration, Maxima and Minima, Matrices and Determinants.

Course Objectives:

1. To acquaint the students to rank of matrix, solution of simultaneous equations, Eigen values and Eigen vectors.
2. To acquire techniques of the expansion of functions about any point and to evaluate the indeterminate forms of limits.
3. To make students familiar with multivariable differentiation and its applications.
4. To introduce to student awareness of concept of Fourier series.

Course Outcomes: After completion of this course, students will able to -

CO1	Use of matrix method for solving system of simultaneous linear equations.
CO2	Find eigen values and eigen vectors of the matrix.
CO3	Describe the power series expansion of a given function and evaluate limits.
CO4	Understand the basic concepts of partial derivatives**.**
CO5	Evaluate partial derivatives to estimate maxima and minima of function of multiple variables.
CO6	Determine the Fourier series representation and harmonic analysis for design.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**System of Linear Equations:** Rank of a matrix, System of linear equations, Linear dependence and independence of vectors, Linear and orthogonal transformations, Application to problems in engineering.	7
2.	**Eigen Values and Eigen Vectors, Diagonalization:** Eigen values and Eigen vectors, Cayley-Hamilton theorem, Diagonalization of a matrix, Reduction of quadratic forms to canonical form by linear and orthogonal transformations.	7
3.	**Differential Calculus:** Rolle's theorem, Mean value theorems, Taylor's series and Maclaurin's series, Expansion of functions using standard expansions, Indeterminate forms.	7
4.	**Partial Differentiation:** Partial derivatives of first and higher orders, Euler's theorem on homogeneous functions, Partial derivative of composite functions, Total derivative and Implicit differentiation	7
5.	**Applications of Partial Differentiation:** Jacobians and their applications, Errors and Approximations. Maxima and minima of functions of two variables, Lagrange's method of undetermined multipliers.	7
6.	**Fourier Series:** Definition, Dirichlet's conditions, Full range Fourier series, Half range Fourier series, Harmonic analysis.	7
	TOTAL	**42**

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)									**Semester:** I
Course: Engineering Chemistry									**Code:** 26COBS102
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
02	-	-	02	40	60	-	-	-	100

Prerequisites:

Basic knowledge of volumetric analysis, structure property relationship, classification and properties of polymers, electromagnetic radiation, electrochemical series.

Course Objectives:

1. To familiarize the students with the basic phenomenon/concepts of chemistry and its applications in various fields of Engineering.
2. To impart knowledge of technologies involved in water analysis to improve water quality.
3. To learn significance science of corrosion and preventive methods used for minimizing corrosion.
4. To understand structure, properties and applications of speciality polymers and nanomaterials.

Course Outcomes: After completion of this course, student will be able to -

CO1	Analyze water softening parameters.
CO2	Utilize different analytical methods for analysis of various chemical compounds.
CO3	Understand the mechanism of destruction of metals (corrosion) and effective preventive measures.
CO4	Explore the knowledge of advanced engineering materials for various engineering applications.
CO5	Analyze fuel and suggest use of alternative fuels.
CO6	Familiarize with classification, properties and applications of nanomaterials.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Water Technology:** Introduction, Chemical Analysis of Water- Hardness; Temporary and Permanent, Alkalinity (Hydroxide, Carbonate and Bicarbonate), Softening Methods: Zeolite and Demineralization Process, Water Purification: Reverse Osmosis. Simple Numerical on Hardness Determination and Alkalinity Calculation.	5
2.	**Instrumental Methods of Analysis:** Types of analysis: Quantitative and Qualitative analysis Introduction, Instrumentation and Applications of following methods: Colorimetry, pHmetry (Titration of Strong acid versus Strong base), Conductometry (Titration of Strong acid versus Strong base)	5
3.	**Corrosion Science:** Introduction, Types of Corrosion-Dry and Wet corrosion, Wet Corrosion Mechanism: Hydrogen Evolution and Oxygen Absorption, Factors affecting rate of corrosion. Methods of prevention of corrosion: Cathodic	4

	Protection(Sacrificial Anode), Anodic Protection (Anodizing), Methods to apply Metallic Coatings-Hot dipping, Electroplating.	
4.	**Engineering Polymers:** Polymers: Introduction, Definition of Polymer, Monomer and Functionality of monomers Speciality Polymers: Introduction, Preparation, Properties and Applications of the following polymers: 1. Engineering Thermoplastic: Polycarbonate 2. Conducting Polymer: Polyacetylene Polymer Composites: Introduction, Constituents of composite, Advantages over conventional materials, Applications, Fiber Reinforced Plastic (FRP)-Glass reinforced and Carbon reinforced.	5
5.	**Fuels and Combustion:** Introduction, Calorific value - Definition, Gross and Net calorific value, Determination of Calorific value: Principle, Construction and Working of Bomb Calorimeter (Simple Numerical), Solid fuel: Coal: Analysis of Coal-Proximate (Simple Numerical). Alternate fuels: Biodiesel and Power alcohol. Hydrogen as future fuel: Production, Advantages, Storage and Applications in Hydrogen fuel cell.	5
6.	**Nanomaterials:** Introduction, Classification of Nanomaterials Based on Dimensions, Nanoscale materials: Structure, Properties and Applications of Graphene and Quantum dots (semiconductor nanoparticles), Importance of Nanotechnology in engineering applications.	4
	TOTAL	**28**

CO2	Utilize different analytical methods for analysis of various chemical compounds.
CO3	Understand the mechanism of destruction of metals (corrosion) and effective preventive measures.
CO4	Explore the knowledge of advanced engineering materials for various engineering applications.
CO5	Analyze fuel and suggest use of alternative fuels.
CO6	Familiarize with classification, properties and applications of nanomaterials.

List of Experiments:

A. Lab Experiments (Any Seven)

1. Determination of hardness of water by EDTA method.
2. Determination of alkalinity of water.
3. Determination of strength of strong acid using pH meter.
4. Determination of maximum wavelength of absorption of $CuSO_4$/$FeSO_4$/$KMnO_4$, verify Beer's law and find unknown concentration of given sample.
5. Titration of a mixture of strong acid with strong base using Conductometer.
6. Preparation of phenol-formaldehyde/urea-formaldehyde resin.
7. Proximate analysis of coal.
8. Coating of copper or zinc on iron plate using electroplating.
9. Determination of the molecular weight of a polymer by using Ostwald's Viscometer.

B. Demonstration (virtual) (Any One)

10. Demonstration of effect of environmental conditions on metal by weight loss method.
11. Synthesis of oxide nanoparticles.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)						**Semester:** I			
Course: Basic Electrical and Electronics Engineering						**Code:** 26COES101			
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
03	-	-	03	40	60	-	-	-	100

Prerequisites:

Basic Mathematics, Basic Knowledge of Computer Hardware

Course Objectives:

1. To understand fundamental electrical quantities and basic DC circuit analysis techniques and their application in real-world and computer systems.
2. To comprehend AC circuit fundamentals and analyze power in AC circuits, including its role in power supplies for computer systems.
3. To explore the working principles of electrical machines and their efficient use in minimizing power consumption in industrial and computer systems.
4. To understand the basic principles of semiconductor materials and diodes, and their applications in power regulation for electronic devices.
5. To study the working principles and applications of transistors and amplifiers in switching and amplification circuits for computing devices.
6. To gain knowledge of digital logic circuits, number systems, and Boolean algebra, with applications in digital data processing and computer systems.

Course Outcomes: After completion of this course, student shall be able to

CO1	Understand basic circuit laws to analyze simple DC circuits used in computing hardware.
CO2	Analyze AC circuits and understand their significance in powering computing systems.
CO3	Understand the function of transformers and electrical machines, especially their roles in power distribution for computing systems
CO4	Understand the basic semiconductor devices used in power regulation and protection within computer systems.
CO5	Gain knowledge of transistor-based devices and their use in digital switching, amplification, and signal processing in computers.
CO6	Understand the fundamental building blocks of digital systems, essential for understanding the functioning of modern computers and microprocessors.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Basics of DC Circuits and Circuit Analysis:** Introduction to Electrical Quantities: Charge, current, voltage, power, and energy. Ohm's Law and Simple Circuit Calculations: Relationship between current, voltage, and resistance. Series and parallel resistive circuits. Kirchhoff's Laws: Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL).Basic Circuit Analysis Techniques:, Voltage and current division. Application in Computer Systems: Importance of power supply in computer.	6

	Case Study: List and study Various voltages in SMPS.	
2.	**AC Circuits and Power:** AC Fundamentals: Sinusoidal waveforms: amplitude, frequency, and phase. RMS and average values. AC Circuit Components: Impedance in AC circuits (resistors, inductors, and capacitors. Transformers. Electricity Consumption Calculation: Calculation of electricity consumption for households and industries, Case Study: Analysis of electricity bills for homes and small industries, Understanding tariff systems, energy consumption patterns, and energy-saving techniques.	7
3	**Electrical Machines and Power Consumption:** Basics of Electrical Machines: AC motors, DC motors, their working principles and applications. Energy Meters and Billing: Introduction to energy meters used in billing systems. signification of power factor. Application in Computer Systems: Transformers and motors in power supply and cooling systems of computers.	6
4.	**Semiconductor Basics and Applications:** Introduction to Semiconductor Materials: Properties of intrinsic and extrinsic semiconductors. PN Junction Diode: Structure, working principle, and characteristics. Applications of Diodes: Rectifiers (half-wave, full-wave) and voltage regulation using Zener diodes. Case study: Use of diodes in voltage regulation, switching, and protection circuits for computers.	7
5.	**Transistors and Amplifiers:** Introduction to Transistors: Bipolar Junction Transistors (BJTs) and Field Effect Transistors (FETs). Working Principles: BJTs and FETs configurations (common-emitter, common-source). Application of Transistor: as a switch, amplifier. Case Study: study of various amplifier circuit in computer system.	6
6.	**Digital Electronics Fundamentals:** Number Systems: Number systems (Binary, Octal, Decimal, Hexadecimal), Binary arithmetic (addition, subtraction, multiplication, division), Character representation (ASCII, Unicode). Logic Gates, De Morgan's Laws, Boolean Algebra: Basic gates: AND, OR, NOT, NAND, NOR, XOR, XNOR, Simplification using Boolean algebra and Karnaugh Maps. Case study: Digital circuits for data processing, memory units, and arithmetic logic unit (ALU) in computer processors	7

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** I	
Course: Basic Electrical and Electronics Engineering Laboratory								**Code:** 26COES101P	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	50	-	-	50

Prerequisites:

Basic Mathematics, Basic Knowledge of Computer Hardware

Course Objectives:

1. To verify fundamental electrical laws such as Ohm's law, KVL and KCL through measurements on DC circuits.
2. To familiarize students with AC waveform measurement using an oscilloscope, and with the performance testing of a single-phase transformer and speed control of a DC motor.
3. To develop the ability to study the V–I characteristics of a PN junction diode and to construct and analyze half-wave and full-wave rectifier circuits.
4. To introduce the use of a BJT as an electronic switch and to measure its output response.
5. To develop skills in implementing and verifying basic gates, universal gates and a half adder using ICs and truth tables.

Course Outcomes: After completion of this course, student shall be able to

CO1	Verify Ohm's law, KVL and KCL by measurement in DC circuits and validate the results.
CO2	Measure AC waveform parameters, evaluate transformer efficiency and voltage regulation, and analyze DC motor speed control.
CO3	Plot and interpret the V–I characteristics of a PN junction diode and analyze half-wave and full-wave rectifier circuits.
CO4	Demonstrate the switching operation of a BJT and measure its output response.
CO5	Implement and verify basic and universal logic gates and a half adder using ICs and truth tables.

List of Experiments:

Group A: Basics of Electrical Engineering Practical Assignments (Any 4)

1. Verify Ohm's law by measuring current and voltage across different resistors.
2. Apply Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL) in a multi-loop DC circuit and validate results.
3. Measure and plot AC waveforms using an oscilloscope, determining amplitude, frequency, and phase.
4. Measure the efficiency and voltage regulation of a single-phase transformer.
5. Experiment with speed control methods of a DC motor and analyze performance.

Group B: Basics of Electronics Engineering Practical Assignments (Any 5)

1. Study the forward and reverse bias characteristics of a PN junction diode and plot the V-I characteristics.
2. Construct and analyze the performance of half-wave and full-wave rectifier circuits.
3. Use a Bipolar Junction Transistor (BJT) as a switch in a basic circuit and measure the output response.
4. Implement basic logic gates (AND, OR, NOT) using ICs and verify their truth tables.
5. Implement universal logic gates (NAND, NOR) using ICs and verify their truth tables.
6. Implement half adder using basic ICs and verify their truth tables.

Text Books:

1. S.K. Bhattacharya, "Basic Electrical and Electronics Engineering", Pearson Education.
2. V.K. Mehta and Rohit Mehta, S., "Principles of Electrical Engineering and Electronics", Chand Publications.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** I	
Course: Problem Solving and Logic Building								**Code:** 26COES102	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
02	-	-	02	40	60	-	-	-	100

Prerequisites:

Basic knowledge of computers and operating systems, logical reasoning, and analytical thinking skills

Course Objectives:

1. Introduce the fundamental concepts of computers and C programming, including program structure, compilation, variables, constants, operators, input/output, type conversion, and typecasting.
2. Develop programming skills using decision-making and looping constructs to solve computational problems.
3. Develop modular programming skills using functions, parameter passing, recursion, structures, and enumeration.
4. Develop the ability to store and process data using one-dimensional, two-dimensional, and multidimensional arrays.
5. Introduce string manipulation, pointers, and dynamic memory allocation techniques for efficient memory utilization.
6. Develop practical skills in file handling using text and binary files and standard C file operations.

Course Outcomes:

CO1	Explain and apply fundamental C programming concepts, including variables, constants, operators, input/output, type conversion, and typecasting.
CO2	Develop C programs using decision-making and looping constructs to solve computational problems.
CO3	Implement modular C programs using functions, parameter passing, recursion, structures, and enumeration.
CO4	Implement one-dimensional, two-dimensional, and multidimensional arrays and perform array operations.
CO5	Manipulate strings and pointers and apply dynamic memory allocation techniques using malloc(), calloc(), realloc(), and free().
CO6	Implement file-handling applications using standard C functions for processing text and binary files.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Introduction to C:** Introduction to computers, input and output devices, designing efficient programs. Introduction to C, Structure of C program, Files used in a C program, Compilers, Compiling and executing C programs, variables, constants, Input/output statements in C, Operators in C, Type conversion and typecasting.	4
2.	**Decision control and Looping statements:** Introduction to decision control, Conditional branching statements, iterative statements, nested loops, break and continue statements, goto statement.	4

3	**Functions:** Introduction using functions, Function definition, function declaration, function call, return statement, passing parameters to functions, scope of variables, storage classes, recursive functions. C Structures, C Enumeration	5
4.	**Arrays:** Declaration of arrays, accessing the elements of an array, storing values in arrays, Operations on arrays, passing arrays to functions, two-dimensional arrays, operations on two-dimensional arrays, two-dimensional arrays to functions, multidimensional arrays.	4
5	**Introduction to strings:** Reading strings, writing strings, summary of functions used to read and write characters. **Pointers:** Type of Pointers ,Dynamic memory allocation (malloc(),calloc(), realloc(),free())	5
6.	**File Handling:** Types of Files, Create a File, File Operations (fopen (), fclose (), `fwrite()`,/ `fread()` , Opening Modes in Standard I/O	5
	TOTAL	**28**

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** I		
Course: Problem Solving and Logic Building Laboratory							**Code:** 26COES102P		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**EIE**	**TW**	**OR**	**PR**	**Total**
-	02		01			50			50

Prerequisites:

Basic knowledge of computers and operating systems, logical reasoning, and analytical thinking skills

Course Objectives:

1. To develop fundamental C programming skills, including program structure, data types, operators, control structures, functions, recursion, and modular programming.
2. To apply arrays, strings, pointers, dynamic memory allocation, structures, and file handling techniques to solve computational problems.

Course Outcomes: After completion of this course, students will be able to -

CO I	Explain and apply fundamental C programming concepts, including variables, constants, operators, input/output, type conversion, and typecasting.
CO 2	Develop C programs using decision-making and looping constructs to solve computational problems.
CO 3	Implement modular C programs using functions, parameter passing, recursion, structures, and enumeration.
CO 4	Implement one-dimensional, two-dimensional, and multidimensional arrays and perform array operations.
CO 5	Manipulate strings and pointers and apply dynamic memory allocation techniques using malloc(), calloc(), realloc(), and free().
CO 6	Implement file-handling applications using standard C functions for processing text and binary files.

List of Experiments: Write a program using the C language (Any 10)

1. Explain the basic components of a computer system with suitable examples.
2. Describe different input and output devices used in computers.
3. Write a C program to read the student's name, roll number, and marks in three subjects and display the details along with total and average marks.
4. Write a C program to swap two numbers:
   - Using a temporary variable
   - Without using a temporary variable
5. Write a C program to convert:
   - Celsius to Fahrenheit
   - Fahrenheit to Celsius
6. Write a C program to check whether a number is positive, negative, or zero.
7. Write a C program to find the largest among three numbers using if-else.
8. Write a C program to print all prime numbers between 1 and 100.
9. Write a C program to find the factorial of a number using a `for` loop.
10. Write a C program using a function to find the largest of three numbers.
11. Write a C program using a function to check whether a number is prime.
12. Create a structure Student containing:

Roll number, Name, Marks in three subjects, Total, Average Write a program to read and display the details of one student.

13. Create an enumeration for months and display the number of days in a selected month.
14. Write a C program to read n elements into an array and display them.
15. Write a C program to find the largest and smallest elements in an array.
16. Write a C program to read and display a matrix.
17. Write a C program to add two matrices.
18. Write a C program to find the length of a string without using strlen().
19. Write a C program to copy one string to another without using strcpy().

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)									**Semester:** I
Course: Web Application Development									**Code:** 26COVS101
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	4	-	02	-	-	50	-	-	50

Prerequisites:

Knowledge of logic and any programming.

Course Objectives:

1. To understand HTML Fundamentals: elements, attributes, head, body structure.
2. To utilize CSS3 Techniques syntax, manage inclusion, and manipulate properties like color, background, and fonts.

Course Outcomes: After completion of this course, student will be able to -

CO1	Use HTML formatting tags to present content on web page.
CO2	Develop web page using list and hyperlinks.
CO3	Develop web pages using images, colors and backgrounds.
CO4	Design HTML forms using table and frames.
CO5	Apply presentation schemes on content using CSS.
CO6	Publish websites on internet or intranet.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Introduction to HTML** Terminologies used in Web Design: World Wide Web (www), Web Pages, Web Site, Web Browsers, Web Servers and types of sites. Static vs. dynamic web sites, Search Engine. Web page structure: DOCTYPE, HTML, TITLE, HEAD, BODY and other meta tags with attributes. Block Level Elements: Headings, Paragraphs, Breaks, Divisions, Centered Text, Block Quotes, Preformatted text, types of Address, HR tag. Horizontal Rue. Text Level Elements: Bold, Italic, Teletype, Underline, Strikethrough, Superscript, Subscript, DIV tag, displaying special characters, comments.	3
2.	**Lists and Links** Lists: Ordered Lists, Unordered Lists, Definition Lists, Nested Lists. Links: Absolute, Relative and Inline links, use image as link, link to an email address, button as link, types of links, linking various documents for internal and external links, to link different web page of same site, link different location on the same web page, a specific location on different web page of same site, to specific section within the document, inserting E-mail link.	2

3.	**Images, Colors and Background** Image: Types of image format, jpg, bmp, png gif etc. IMG tag, alternate text, image alignment, HSPACE, VSPACE, wrapping text, height and width of images, Image as a link, Inserting Images, formatting image for sizing, alignment. Border and using other attributes with IMG tag. Colors and Backgrounds: The text color, color attribute of FONT tag, text attribute of BODY tag. bgcolor attribute of BODY tag, changing link colors: link, alink, vlink, attributes of BODY tag, Backgrounds: Inserting image as page background, background attributes of BODY tag, creating solid color page background.	2
4.	**Table, Frames and Forms** Table: Table tag with attributes. TABLE, <tr>, <th>, <td> tags. Border, cell spacing, cell padding, width, align, bgcolor attributes. Adding captions: CAPTION tag Formatting contents in the table cells: align, valign, bgcolor, height, width, nowrap attributes. Spanning rows and columns: rowspan and colspan attributes. Frames: Types of Frames with their attributes, Creating frames: FRAMESET tag – rows, cols attributes, FRAME tag – name, frame border, margin height, margin width, src, resize, scrolling Attributes, Use of NOFRAMES tag, Frame targeting. Forms: Creating basic form: FORM tag, action and method attributes, Form fields: Single line text field, password field, multiple line text area, radio buttons, and check boxes. Pull down menus: SELECT and OPTION tags. Buttons: submit, reset and generalized buttons. Formatting technique: Using table to layout form.	2
5.	**Cascading Style sheets** Cascading Style Sheets: Different types of Style Sheets, Benefits of using CSS. Adding style to the document: Linking to style sheets, Embedding style sheets, Using inline style, Selectors: CLASS rules, ID rules. Style sheet properties: Font, text, box, color and background properties; Creating and Using a simple external CSS file; Using the internal and inline CSS; background and color gradients in CSS Setting font and text in style sheet using table layout.	2
6.	**Website Hosting** Website Hosting: Concept of Internet and Intranet. Publishing website on Intranet, installing and configuring web server, uploading files on intranet site, access intranet-based website, publishing website site on Internet, hiring web space, uploading files using FTP, virtual hosting, access internet-based website.	2
	TOTAL	**13**
List of Experiments: (Any 10 Experiment)		

DEPARTMENT OF COMPUTER ENGINEERING

1. Create web page using structure tags to display sample message.
2. Create a web page for displaying a paragraph using formatting tags, HR tags.
3. Create a web page using text level and border level tags.
4. Design a web page for implementing ordered list and unordered list.
5. Create a web page to link:
   - A different web page of same site
   - A different location on the same web page
   - A Specific location on different web page of same site
6. Create a webpage which includes photos and align with the ALT property on the left, right, and center.
7. Insert images on web page using various attributes and set image as background.
8. Create a webpage containing any image and add a hyperlink to another webpage. Use width and height property for an image.
9. Create table within table and also insert an image within the data elements of the table.
10. Create a webpage that displays first year timetable. Make effective use of rowspan and colspan attributes. Make use of <th> tag.
11. Create a webpage that provides a form for filling information. The webpage must contain following elements:
    - Textbox
    - Radio buttons
    - Checkboxes
12. Create a webpage that provides a form for filling information. The webpage must contain following elements:
    - Buttons (Submit/Reset)
    - Text area
    - Textbox for passwords
13. Create a web page for demonstration of CSS by applying internal style, external and inline style.
14. Create a web page for demonstration of CSS responsive web design.
15. Create a website and host on open source.
16. Create a web page to represent personal portfolio.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech.(Mech/AIML/AIDS/R &A/ ECE/ E & TC/ Computer/IT)									**Semester:** I
Course: Professional Development - I									**Code:** 26COCC101
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**EIE**	**TW**	**OR**	**PR**	**Total**
1	2		02			50			50

Course Objectives:

3. To introduce students on professional development skills and its importance in building personal and professional life.
4. To inculcate soft skills like goal setting, time management, emotional intelligence, leadership etc required in today's professional environment.
5. To make students aware of employability skills like workplace communication, correspondence at work, team work and workplace etiquette to imbibe better employability maturity.

Course Outcomes: After completion of this course, students will be able to -

CO I	Know their own values, significance of discipline, self-grooming applied effectively in career, personal life, at workplace, society and professional world.
CO 2	Understand the importance of necessity of various soft skills required in today's professional workplace environment for better growth and leadership perspective.
CO 3	Aware of significance of emotional intelligence at workplace and tapping leadership opportunities at engineering and technological organizations.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Values:** Types of Values, Internal and External Stakeholders, SWOT analysis **Self-discipline:** Self-discipline impact in your life and society, Techniques to build self-discipline, Self-review and actions. **Self-Grooming**: Meaning and significance of self-grooming at personal, organizations, social and professional Level.	14
2.	**Soft Skills basics (Personal orientation)**: Soft Skills and hard skills, soft skills cultivation techniques. Attitude: positive self-talk, self-esteem, adaptability Goal Setting: SMART goals, guidelines for goal setting types of goals, goals at workplace, cascading goals Time Management: Prioritization, time stressors, time stealers time management matrix productivity pyramid	14
3.	**Soft Skills Advanced (Professional and Social orientation)** Emotional Intelligence: enhancing your emotional awareness, change and stress, crisis management Leadership: Leadership and assertiveness, problem solving and brain storming, leader attributes, types of leaders, leader features in a professional environment Social Consciousness.: Social awareness and civic responsibility, social intelligence, social inclusion, social entrepreneurship sustainable development and conversation of resources	14

-	02	-	01	-	-	25	-	-	25

Prerequisites:

Basic knowledge of Indian classical music and Guitar musical instrument.

Course Objectives:

1. To build a strong foundation in Indian classical dance through mastering basic techniques, rhythms, expressions, and repertoire, culminating in a performance.

Course Outcomes: After completion of this course, students will be able to -

CO1	Illustrate the fundamental aspects of Guitar instrument.
CO2	Demonstrate the performance of Guitar Instrument.
CO3	Apply different types Chords.
CO4	Apply basic outline through various prescribed ragas practically.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	Introduction to the Guitar	2
2.	Understanding standard tuning	2
3.	Introduction to tablature and note reading	2
4.	Introduction to basic music theory concepts	2
5.	Understanding scale, intervals, and chords	2
6.	Learning more open chords: D major, D minor, C major, G major	2
7.	Understanding power chords and their shapes	2
8.	Understanding barre chord shapes: F major, B minor	2
9.	Finding Chords by Ear	2
10.	Chord Progressions	2
11.	Advanced Chord Types	2
12.	Transposing Chord	2
13.	Review and Practice	2
14.	Introduction to Scales	2

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** I	
Course: Liberal Learning – I (Singing)								**Code:** 26COCC102B	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Basic knowledge of Indian classical music in singing.

Course Objectives:

1. To offer students' knowledge of the basic concepts of Singing in a very easy to understand manner with their practical applicability.

Course Outcomes: After completion of this course, students will be able to -

CO1	Illustrate the fundamental aspects of Singing.
CO2	Demonstrate the performance of Singing.
CO3	Apply basic outline through various prescribed ragas practically.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	Voice Culture in Indian Semi Classical Singing.	2
2.	Basics of Singing o Introduction to semi classical singing.	2
3.	Basics of Indian Semi Classical Music.	2
4.	Learning Basic Ragas.	2
5.	Music Theory Basics.	2
6.	Vocal Warm-ups.	2
7.	Introduction to Ear Training.	2
8.	Breathe Control.	2
9.	Resonance and Tone Production.	2
10.	Diction and Articulation.	2
11.	Dynamics and Expression.	2
12.	Introduction to Repertoire.	2
13.	Practice Techniques.	2
14.	Interpretation and Expression.	2
	TOTAL	**28**

Text Books:

1. Dr. Theodore Dimon, "Anatomy of the Voice, This Is a Voice".

Reference Books:

1. Richard Miller, "The Structure of Singing", Schirmer Books, London.
2. Jennifer Hamady, "The Art of Singing", Published by Hal Leonard.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** I		
Course: Liberal Learning – I (Cinematography)							**Code:** 26COCC102C		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

A basic understanding of film theory, Camera operation, Lighting techniques and visual storytelling is essential for cinematography.

Course Objectives:

1. To make students effectively use their camera's components, study fundamental photography techniques and apply basic to advanced editing skills.

Course Outcomes: After completion of this course, students will be able to -

CO1	Illustrate the fundamental aspects of camera equipment.
CO2	Demonstrate the performance of camera equipment.
CO3	Ability to translate creative concepts into visually engaging and coherent film or video projects.
CO4	Mastery in crafting compelling visual narratives through camera angles, lighting, and composition

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	Introduction to Photography	2
2.	Understanding camera components (lens, shutter, sensor)	2
3.	Exposure Triangle	2
4.	Introduction to the rule of thirds, leading lines, and framing	2
5.	Understanding autofocus vs. manual focus	2
6.	Introduction to natural and artificial lighting	2
7.	White Balance and Color Theory	2
8.	Motion and Long Exposure	2
9.	Basics of portrait photography	2
10.	Basics of landscape photography	2
11.	Overview of post-processing software (e.g., Adobe Light room, Photoshop)	2
12.	Introduction to advanced editing tools	2
13.	Organizing and Storing Photos	2
14.	Final Project Presentation and Review	2
	TOTAL	**28**

Text Books:

1. Tania Hoser, "Introduction to Cinematography", Taylor & Francis.

Reference Books:

1. Anat Pick, "Screening Nature", Berghahn Books.
2. Blain Brown, "Cinematography: Theory and Practice", Taylor & Francis.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** I		
Course: Liberal Learning – I (Dance)							**Code:** 26COCC102D		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Good stamina, flexibility and familiarity with simple rhythmic patterns and beats.

Course Objectives:

1. To build a strong foundation in Indian classical dance through mastering basic techniques, rhythms, expressions, and repertoire, culminating in a performance.

Course Outcomes: After completion of this course, students will be able to -

CO1	Understand the fundamental postures, hand gestures and basic steps of Indian classical dance.
CO2	Understand and perform dance sequences to various rhythmic cycles (Tala) with confidence.
CO3	Convey emotions and stories through facial expressions (Abhinaya) and body language.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	Overview of Indian Classical Dance	2
2.	Fundamental Postures and Hand Gestures (Hasta Mudras)	2
3.	Introduction to Basic Steps (Adavus or Tatkars)	2
4.	Rhythmic Patterns and Clapping (Tala)	2
5.	Advanced Basic Steps	2
6.	Strength and Conditioning	2
7.	Introduction to Basic Expressions (Abhinaya)	2
8.	Integrating Steps and Expressions	2
9.	Intermediate Rhythmic Patterns	2
10.	Improvisation and Creative Movement	2
11.	Introduction to Advanced Movements	2
12.	Review and Feedback	2
13.	Learning a Simple Dance Piece - Part 1	2
14.	Learning a Simple Dance Piece - Part 2	2
	TOTAL	**28**

Text Books:

-	02	-	01	-	-	25	-	-	25

Prerequisites:

Basic knowledge of Indian classical music and Keyboard musical instrument.

Course Objectives:

1. To offer students' knowledge of the basic concepts of playing Keyboard in a very easy to understand manner with their practical applicability.

Course Outcomes:

CO1	Illustrate the fundamental aspects of Keyboard instrument.
CO2	Demonstrate the performance of Keyboard Instrument.
CO3	Apply different types of Chords.
CO4	Apply basic outline through various prescribed ragas practically.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	Introduction to the Keyboard	2
2.	Understanding Notes and Keys	2
3.	Basic Music Theory	2
4.	Introduction to the C major scale	2
5.	Learning to play simple melodies in C major	2
6.	Introduction to Chords	2
7.	Combining Melodies and Chords	2
8.	Review and practice melodies and chords	2
9.	Introduction to Minor Scales	2
10.	Introduction to additional chords (D major, E minor)	2
11.	Understanding chord progressions (e.g., I-IV-V)	2
12.	Review scales, chords, and progressions	2
13.	Introduction to Arpeggios	2
14.	Dynamics and Expression	2
	TOTAL	**28**

Text Books:

1. Chuan C. Chang, "Fundamentals of Piano Practice", Create space Independent Publishing Platform.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** I		
Course: Liberal Learning – I (Basketball)							**Code:** 26COCC102F		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To develop foundational basketball skills, including dribbling, passing, shooting, and defense, while understanding game rules and strategies through practical gameplay and scrimmage.

Course Outcomes: After completion of this course, students will be able to -

CO1	Demonstrate basic basketball skills such as dribbling, passing, shooting, and defensive fundamentals effectively.
CO2	Apply offensive and defensive strategies, including transition play, during gameplay and scrimmages.
CO3	Understand and implement basketball game rules and referee gestures accurately in practical situations.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**History & Introduction to Basketball:** History & introduction to the game, equipment, safety. Understand the basic rules.	2
2.	**Terminology & Dimensions:** Terms used in basketball and measurements of the court.	2
3.	**Warmup & Cooldown:** Basics of warmup & cooldown for preventing stiffness and injury and speedy recovery.	2
4.	**Player Stance & Ball Holding:** Learn the ready position and correct way to hold the basketball. Demonstrate proper stance and secure ball control.	2
5.	**Passing & Receiving (Chest):** Practice accurate chest passing and receiving techniques. Perform chest pass with proper technique and accuracy.	2
6.	**Passing & Receiving (Bounce):** Learn bounce passing and receiving while stationary. Execute bounce passes confidently.	2
7.	**Assessment – I**	2
8.	**Dribbling (Stationary):** Practice basic dribbling using both hands. Control the basketball while stationary.	2
9.	**Dribbling (Movement-Walk/Jog/Run):** Develop dribbling while walking and changing direction maintain ball control while moving.	2
10.	**Shooting (Technique & Set Shot):** Learn the basic shooting technique. Perform a set shot with correct body mechanics.	2
11.	**Shooting (Lay-Up):** Practice right- and left-hand lay-up technique. Execute basic lay-up shots effectively.	2
12.	**Rebounding:** Learn positioning and timing for offensive and defensive rebounds. Demonstrate correct rebounding technique.	2
13.	**Individual Defense:** Practice defensive stance and movement. Apply basic individual defensive skills.	2
14.	**Assessment – II**	2
	TOTAL	**28**

Text Books:

1. K.K. Sharma, "Basketball: Skills and Drills", Sports Publications.
Reference Books:
1. Dr. P.K. Kher, "Basketball Coaching: A Complete Guide", Khel Prakashan. 2. S. Reddy, "The Ultimate Guide to Basketball Training", Blue Rose Publisher.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** I		
Course: Liberal Learning – I (Cricket)							**Code:** 26COCC102G		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To enhance cricket skills from basics to advanced techniques, focusing on tactics, fitness, and specialized fielding and wicket keeping through targeted practice and match simulations.

Course Outcomes: After completion of this course, students will be able to -

CO1	Master fundamental and advanced cricket techniques, including batting, bowling, and specialized fielding and wicket keeping.
CO2	Demonstrate an understanding of game scenarios and tactical strategies, applying them effectively during match simulations and pressure situations.
CO3	Improve physical fitness, strength, and conditioning, with targeted skill enhancement and mid-season assessments to track progress.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**Introduction to Cricket, History & Evolution:** Understand the Origin, Formats, and Growth of Cricket	2
2.	**Laws of Cricket & Spirit of the Game:** Learn MCC Laws and Fair Play	2
3.	**Cricket Ground, Pitch & Equipment:** Identify Dimensions and Equipment	2
4.	**Warm-Up, Stretching & Physical Fitness:** Develop basic fitness routines	2
5.	**Grip, Stance & Ready Position:** Learn Correct Batting Fundamentals	2
6.	**Front Foot/ Back Foot Batting Techniques:** Practice defensive and attacking strokes/ execute pull, cut, and back-foot defence	2
7.	**Assessment - I**	2
8.	**Bowling Grip & Run-Up:** Learn bowling basics	2
9.	**Pace Bowling Fundamentals:** Develop seam and swing basics	2
10.	**Spin Bowling Fundamentals:** Learn finger and wrist spin techniques	2
11.	**Fielding Basics:** Catching, throwing, and ground fielding	2
12.	**Wicket keeping Fundamentals:** Basic stance, catching, and footwork	2
13.	**Mini Match Practice:** Apply learned skills	2
14.	**Assessment - II**	2
	TOTAL	**28**

DEPARTMENT OF COMPUTER ENGINEERING

1. Sports and Performance Nutrition, IIT Madras, https://onlinecourses.nptel.ac.in/noc24_hs82/

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** I	
Course: Liberal Learning – I (Rifle and Pistol Shooting)								**Code:** 26COCC102H	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To develop fundamental skills in rifle and pistol shooting through technical knowledge, practical drills, and mental preparation for competitive performance.

Course Outcomes: After completion of this course, students will be able to -

CO1	Master fundamental and advanced shooting techniques for both rifle and pistol, including aiming, breathing, and triggering.
CO2	Develop strong mental focus and relaxation techniques essential for high-performance shooting and competition readiness.
CO3	Gain hands-on experience in live shooting drills and positional shooting, preparing them for competitive shooting scenarios.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**Introduction to Shooting Sports and Course Orientation:** History of shooting, information about guns.	2
2.	**Safety Rules, Range Etiquette and ISSF rules:** Rules that should be followed on range and during competitive matches.	2
3.	**Events (Rifle & Pistol):** Information about all different events.	2
4.	**Parts and Functions of gun:** Knowledge about all the parts and how it works	2
5.	**Shooting Equipment and Accessories:** Information about equipment's and it work	2
6.	**Range Commands and Safe Handling:** Regulations followed during rifle and pistol shooting competition. Maintaining discipline, following safety instructions, handling rifle responsibly.	2
7.	**Assessment - I -(Theory and Practical):** Evaluation based on history of game, safety rules and ISSF rules.	2
8.	**Shooting Stance:** Upright posture where the shooters balance the body while supporting the rifle steadily	2
9.	**Grip Techniques:** Proper grip and its techniques	2
10.	**Sight Alignment:** How to align sight with target	2
11.	**Sight Picture:** Sight picture definition and its visualization	2
12.	**Breathing Control:** Breathing techniques	2
13.	**Trigger Control:** Proper triggering and its steps	2
14.	**Follow-Through:** Importance of follow through and its process	2
	TOTAL	**28**

Reference Books:

1. David Watson, "ABCs of Rifle Shooting", Gun Digest (Imprint of KP Books), 2014

Course: Liberal Learning – I (Volleyball)								**Code:** 26COCC102I	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To develop foundational volleyball skills, including serving, passing, setting, spiking, and blocking, while mastering game rules and strategies through practical gameplay and scrimmage.

Course Outcomes: After completion of this course, students will be able to -

CO1	Demonstrate proficiency in basic volleyball skills such as serving, passing, setting, spiking, and blocking.
CO2	Apply offensive and defensive strategies effectively, including serve receive and transition play, during gameplay.
CO3	Understand and implement volleyball rules and referee gestures, applying them accurately during practical gameplay and scrimmages.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**Introduction to Volleyball, History:** Introduction to volleyball, origin and development of the game, inventor (William G. Morgan), evolution of volleyball at national and international levels, governing bodies (FIVB, VFI), importance and benefits of volleyball, basic objectives of the game.	2
2.	**Terminology:** Basic volleyball terminology: rally, serve, receive, pass, set, spike, dig, block, libero, rotation, substitution, attack line, service zone, front row, back row, side-out, fault, ace, rally point system, timeout and other common terms.	2
3.	**Rules, Court Dimensions:** Volleyball court dimensions (18 m × 9 m), attack line, service zone, free zone, net height (Men: 2.43 m, Women: 2.24 m), ball specifications, team composition, scoring system, rotation rules, basic violations and referee signals.	2
4.	**Fundamental Stance and Movement:** Ready position, defensive and offensive stance, body balance, footwork techniques, forward, backward, lateral and crossover movement, movement efficiency, maintaining proper posture during play.	2
5.	**Ball Familiarization and Hand-Eye Coordination:** Ball handling exercises, ball bouncing, self-tossing, partner toss, catching drills, wall passing, coordination drills, reaction exercises and confidence-building with the volleyball.	2
6.	**Passing Skill (Dig Pass):** Underhand pass (forearm pass): body position, platform formation, foot placement, contact point, follow-through, partner passing drills, movement before contact, common mistakes and corrective exercises.	2
7.	**Assessment - I**	2
8.	**Passing Skill (Volleypass):**Hand position, finger contact, body alignment, extension of arms and legs, partner setting drills, wall setting, accuracy exercises, common errors and corrections.	2
9.	**Underhand Service:** Grip, stance, ball toss, arm swing, point of contact, follow-through, target serving, serving consistency drills and correction of common faults.	2

10.	**Overhand Service:** Proper toss, striking technique, body mechanics, weight transfer, accuracy, power generation, target practice, introduction to float serve, error correction.	2
11.	**Revision and Integrated Skill:** Revision of all previously learned skills, combining passing, setting and serving in continuous drills, partner and group activities, communication, teamwork and basic game situations**.**	2
12.	**Hitting Mechanics:** Introduction to attacking technique: approach steps, arm swing, jump mechanics, body coordination, and timing, landing technique, hitting drills without net and with controlled tosses.	2
13.	**Introduction to Spiking:** Basic spiking technique: 3-step/4-step approach, take-off, arm action, ball contact, follow-through, landing safely, simple attacking drills and introduction to offensive play.	2
14.	**Assessment - II**	2
	TOTAL	**28**

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** I	
Course: Liberal Learning – I (Football)								**Code:** 26COCC102J	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To enhance players' technical skills, tactical understanding, physical fitness, teamwork, and sportsmanship, fostering a comprehensive understanding and appreciation of the game.

Course Outcomes: After completion of this course, students will be able to -

CO1	To identify and describe the fundamental skills and strategies involved in football, including ball control, dribbling techniques, basic offensive and defensive tactics.
CO2	To apply advanced dribbling and passing techniques during practice sessions.
CO3	To design and execute a cohesive game plan that integrates set pieces, team chemistry, and communication, evaluating its effectiveness through simulation matches.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**Introduction to Football: History & Development:** Understand the history, origin, and global development of football, including its evolution into the world's most popular sport.	2
2.	**Laws of the Game:** Understand and apply the fundamental Laws of the Game, including rules, fouls, player positions, and match procedures.	2
3.	**Football Field, Equipment & Safety:** Identify the dimensions of a football field, use essential equipment correctly, and follow key safety practices to ensure safe participation in football.	2
4.	**Warm-up, Cool-down & Injury Prevention:** Demonstrate proper warm-up and cool-down techniques and apply injury prevention practices to enhance performance and reduce the risk of injuries.	2
5.	**Physical Fitness for Football: D**evelop the physical fitness components—strength, speed, endurance, agility, flexibility, and coordination—required for effective football performance.	2
6.	**Ball Familiarization:** Develop confidence and control by performing basic ball familiarization exercises using both feet to improve touch, coordination, and ball control.	2
7.	**Assessment - I**	2
8.	**Long Passing & Lofted Pass: E**xecute accurate long and lofted passes with proper technique, power, and precision to effectively switch play and create attacking opportunities.	2
9.	**Receiving and First Touch: D**emonstrate effective receiving and first-touch techniques to control the ball quickly and prepare for the next action in play.	2
10.	**Dribbling Fundamentals:** Demonstrate fundamental dribbling techniques to maintain close ball control while moving with speed, balance, and confidence.	2
11.	**Turning & Shielding the Ball:** Demonstrate effective turning and shielding techniques	2

	to protect the ball, maintain possession, and evade opponents under pressure.	
12.	**Heading Techniques:** Demonstrate correct heading techniques using proper timing, body position, and contact to effectively control, clear, and direct the ball.	2
13.	**Small-Sided Game (5v5):** Apply football skills, decision-making, teamwork, and tactical principles effectively in a 5v5 small-sided game environment.	2
14.	**Assessment-II**	2
	TOTAL	**28**

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** I	
Course: Indian Knowledge System and Financial Literacy								**Code:** 26COIK101	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
02	-	-	02	-	-	50	-	-	50

Prerequisites:

Basic knowledge of algebra and mathematical operations.

Course Objectives:

1. To facilitate the students with the concepts of Indian traditional knowledge and to make them understand the importance of roots of Indian Knowledge System.
2. To make students proficient in fundamental financial concepts essential for managing personal finances effectively.
3. To equip students with practical budgeting skills to empower them to achieve financial independence.

Course Outcomes: After completion of this course, students will be able to -

CO1	Understand IKS fundamentals, Indian numeral system, and key contributions in mathematics and measurement.
CO2	Recognize metal working techniques, Vastushastra principles, historical engineering and architecture practices.
CO3	Understand financial concepts, money types, bank accounts, and essential financial terms for practical application.
CO4	Manage budgets, credit, loans, and develop financial plans for career and education goals.
CO5	Understand various investments, risk management, insurance types, and develop retirement planning strategies.
CO6	Comprehend tax forms, compliance, fraud protection, and financial considerations for investments and business.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Foundations of Indian Knowledge System:** Definition and scope of IKS, Historical development and significance. **Number System and Units for Measurement**: Salient features of the Indian numeral system, The discovery of zero and its importance, Decimal Systems, Measurement of time, distance and weight. **Mathematics**: Unique aspects of Indian mathematics, Great mathematicians and their significant contributions in the area of arithmetic, algebra, geometry, trigonometry, binary mathematics.	5
2.	**Application of Indian Knowledge System:** Metals and Metal Working: Mining and ore extraction, Extraction of iron from Biotite by indigenous techniques, Lost wax casting of idols and artefacts, Architecture and Structures: Vastushastra, Unitary buildings and Town planning, Temple architecture. Physical structures in India, Irrigation and water management	5

3.	**Finance:** Importance of Financial Literacy for Engineers, Understanding Money, Types of Money- Cash, Cheque, UPI Payment, Digital Currency, etc Types of bank accounts - saving, salary, current, loan, etc., Basic financial Terms- Income, Expenditure, Balance, saving, loan, interest rates, compound interest rate, credit, Investment, Taxes	4
4.	**Financial Planning:** Personal budgeting, Understanding debit and credit card, credit score, Types of credit card, credit card payment cycle, Barrowing, Loans / Debts, Types of loans, Terms of barrowing, Loan, Interest rate, Principal, EMI, EMI Calculation, Repayment of loan/debt strategy, Financial Planning for Career Development, Higher studies,	5
5.	**Investment and Wealth Management:** Basics of Investing, Effect of compounding, Types of Investment (fixed deposit, recurring deposits, Insurance policies, Bonds, Mutual Funds, Stocks, real estate, etc.) Risk and Return, Concept of SIP, STP and SWP, Stock Market, Stock Exchanges, reading of stock market indices, Life insurance, healthcare insurance, vehicle insurance, Importance of early retirement planning, Investment strategy, Pension Plan, Portfolio management,	5
6.	**Finance Compliance:** Types of Taxes, Types of Income Tax return form and Filling, Taxes and reforms, Impact of taxation policy on Investment, Scams and Frauds, Protection of personal information, Financial consideration for starting business, Real estate and purchase	4
	TOTAL	**28**

SYLLABUS

SEMESTER - II

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** II		
Course: Engineering Mathematics - II							**Code:** 26COBS203		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
03	-	-	03	40	60	-	-	-	100

Prerequisites:

Basic concept of Differentiation, Integration and Vector.

Course Objectives:

1. To introduce student some methods to find the solution of first order & first degree ordinary differential equations with its applications.
2. To make students familiar with vector differentiation.
3. To acquaint the student with mathematical tools needed in evaluating improper integrals, multiple integrals and their usage.

Course Outcomes: After completion of this course, students will able to -

CO1	Solve first order ordinary differential equation.
CO2	Apply differential equation in engineering applications.
CO3	Find the velocity vector, gradient, divergence, curl.
CO4	Evaluate improper integrals.
CO5	Set up and solve multiple integrals for regions in the plane.
CO6	Use of multiple integrals to find area bounded by curves & volume bounded by surfaces.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**First Order Ordinary Differential Equation:** Exact differential equations, Equations reducible to exact form. Linear differential equations, Equations reducible to linear form and Bernoulli's equation.	7
2.	**Applications of Differential Equations:** Applications of differential equations to orthogonal trajectories, Newton's law of cooling, Kirchhoff's law of electrical circuits, Rectilinear motion, Simple harmonic motion, One dimensional conduction of heat.	7
3.	**Vector Differential Calculus:** Velocity vector, acceleration vector, tangential and normal component of acceleration, Vector differential operator, gradient, directional derivatives, angle between surfaces, Divergence and curl, solenoidal and irrotational field	7
4.	**Integral Calculus:** Reduction formulae, Beta and Gamma functions, Differentiation under integral sign and Error functions.	7
5.	**Multiple Integrals:** Double integration in Cartesian & polar coordinates, Change of order of integration, Triple integral in Cartesian & polar coordinates.	7
6.	**Applications of Multiple Integral:** Applications to find Area, Volume, Mass, Centre of gravity and Moment of inertia.	7
	TOTAL	**42**

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** II	
Course: Engineering Physics								**Code:** 26COBS204	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
02	-	-	02	40	60	-	-	-	100

Prerequisites:

Fundamentals of Physics, basic of interference, polarization, de-Broglie hypothesis, semiconductor and ultrasonic.

Course Objectives:

1. To make the students understand and study the basic principles of Physics.
2. To provide firm grounding to the students in the concept of physics to resolve many engineering and technological problems.
3. To impart the knowledge of the fundamentals of physics to the students through hands on experiments and extend it to relevant engineering applications.

Course Outcomes: At the end of the course, Student will be able to -

CO1	Explain basics of interference and polarization connected to engineering applications
CO2	Make use of Laser technology and Optical fiber in various disciplines.
CO3	Outline the fundamentals of Quantum Physics and relate it to engineering applications
CO4	Apply basics of semiconductors for solving engineering problems.
CO5	Extend the understanding of Ultrasonic and NDT in engineering.
CO6	Interpret the use of nanoparticles and superconductors in the field of engineering.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Wave optics:** **Units and its conversion-**Length, Mass, Velocity, Acceleration Momentum, Time, Temperature, Wavelength, Energy, Current, Voltage, Power, Intensity, Amplitude, Frequency, Pressure, Resistance, compressibility, resistivity, conductivity, Mobility, Angle. **Interference-** Interference in thin film of uniform thickness and its conditions, Engineering Applications – Ant-Reflection coating (ARC), **Polarization**- Polarization and its types, Malus law and Brewster's law (Simple numerical), Double refraction, Huygens's theory of double refraction, Differentiate between positive & negative crystal, Engineering applications of polarization: Liquid Crystal Display (LCD).	5
2.	**Laser and Optical Fiber:** **Laser**- Basic Principles of laser, Elements of Laser, Characteristics of laser, He-Ne laser (Gas laser), Applications of laser – Medical, Industrial and Holography-Recording. **Optical fibers:** Propagation of light (Acceptance angle, Acceptance cone, Numerical aperture), (Simple numerical). Types of optical fibers, Advantages of optical fiber communication, Applications of optical fiber in Medical, Communication, Entertainment, Data Security	5

3.	**Quantum Physics:** De Broglie hypothesis of matter waves, de Broglie wavelength for a particle accelerated by Kinetic Energy (K.E) and a charged particle accelerated by Potential difference (PD) "V", (Simple Numerical), Properties of matter waves, Heisenberg's uncertainty principle, Electron diffraction Experiment, Tunneling Effect and its engineering applications Scanning Tunneling Microscope (STM)	4
4.	**Semiconductor Physics:** Classification of solids on the basis of band theory, Fermi level and Fermi energy for metal and semiconductor, Position of Fermi level in extrinsic semiconductors (only diagram), Solar cell: principle, working, IV-characteristics, Efficiency and fill factor, Measures to improve efficiency of solar cell, Advantages and applications in environmental sustainability, Hall effect: derivation for Hall voltage and Hall coefficient (Simple numerical).	5
5.	**Ultrasonic and Non-destructive Testing:** **Ultrasonic**- Properties of ultrasonic waves, Generation of ultrasonic waves by inverse piezoelectric effect (using transistor) (Simple Numerical). **Non- Destructive Testing (**NDT) and its objectives, Difference between destructive testing and non- destructive testing, Ultrasonic flaw detection technique, Advantages of NDT (Simple numerical).	4
6.	**Nanoparticles:** Properties of nanoparticles (Optical, Electrical, Mechanical), Applications of nanotechnology (Electronics, Automobile, Medical). **Superconductivity:** Temperature dependence of resistivity, Properties of Superconductivity-Critical magnetic field (Simple Numerical), Meissner effect, Type I and Type II Superconductors, Principle-working of Superconducting Quantum Interface Device (SQUID), Engineering applications.	5
	TOTAL	**28**

Text Books:

1. M. N. Avadhanulu and P.G. Kshirsagar, "Engineering Physics", S. Chand Publications.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** II	
Course: Engineering Physics Laboratory								**Code:** 26COBS204P	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Fundamentals of Physics, basic of interference, polarization, de-Broglie hypothesis, semiconductor and ultrasonic.

Course Objectives:

1. To make the students understand and study the basic principles of Physics.
2. To provide firm grounding to the students in the concept of physics to resolve many engineering and technological problems.
3. To impart the knowledge of the fundamentals of physics to the students through hands on experiments and extend it to relevant engineering applications.

Course Outcomes: At the end of the course, Student will be able to -

CO1	Explain basics of interference and polarization connected to engineering applications
CO2	Make use of Laser technology and Optical fiber in various disciplines.
CO3	Outline the fundamentals of Quantum Physics and relate it to engineering applications
CO4	Apply basics of semiconductors for solving engineering problems.
CO5	Extend the understanding of Ultrasonic and NDT in engineering.
CO6	Interpret the use of nanoparticles and superconductors in the field of engineering.

List of Experiments:

Perform any ten (10) experiment out of 15 and 15th is mandatory.

1. Experiment based on Newton's rings (determination of wavelength of monochromatic light, determine radius of curvature of Plano-convex lens).
2. To verify Law of Malus.
3. Determination of refractive index using Brewster's law.
4. Experiment based on Double Refraction (Determination of refractive indices / Identification of types of crystal).
5. Experiment based on Laser (Determination of thickness of wire / Number of lines on grating surface).
6. Determination of Planck's constant using available experimental setup.
7. To study IV characteristics of Solar Cell and determine parameters (fill factor and efficiency).
8. To determine Hall coefficient and charge carrier density.
9. Determination of velocity of ultrasonic waves and compressibility of given liquid by using Ultrasonic Interferometer.
10. An experiment based on optical fiber.
11. To determine the numerical aperture of optical fiber of laser diode.
12. Temperature dependence characteristics of semiconductor.
13. To determine the band gap energy of a semiconductor sample using a PN junction diode.
14. To determine the unknown wavelength by using plane diffraction grating.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** II		
Course: Digital Systems Design and Architecture							**Code:** 26COES203		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
02	-	-	02	40	60	-	-	-	100

Prerequisites:

Basic knowledge of number systems (binary, decimal), Understanding of fundamental physics related to electricity and circuits

Course Objectives:

1. To understand the fundamental principles of digital logic and its applications in circuit design
2. To design and analyze combinational and sequential circuits.
3. To familiarize students with state machines and algorithmic representation of sequential logic.
4. To introduce programmable logic devices and their applications in digital design.
5. To understand microprocessor architecture and its role in digital systems.
6. To gain knowledge of microcontroller architecture and its applications in embedded systems.

Course Outcomes:

CO1	Students will be able to design and implement combinational circuits using adders, multiplexers, and code converters.
CO2	Students will be able to design sequential circuits using flip-flops, registers, and counters.
CO3	Students will be able to represent and design digital systems using state machines and algorithmic state machines.
CO4	Students will be able to design combinational logic circuits using programmable logic devices (PLD).
CO5	Students will understand the architecture of the 8086 microprocessor and write basic programs using its instruction set.
CO6	Students will gain knowledge of microcontroller architecture and its applications in embedded system design.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Combinational Circuit Design:** **Digital Codes**: Binary, BCD, Grey, Excess-3. **Code Conversions**: Binary to Grey, BCD to Excess-3 **Adders and Subtractors**: Half adder, Full adder, Half subtractor, Full subtractor **Multiplexer**: Types of Multiplexer, Multiplexer Tree **Demultiplexers/Decoders**: Realization of Boolean functions using Multiplexer/ demultiplexer Parity Generator and Checker (Even & Odd), 1 & 2-bit Comparators.	5

2.	**Sequential Circuit Design:** **Flip-Flops**: SR, JK, D, T flip-flops, Preset & Clear operations, Truth Tables and Excitation Tables, Flip-Flop Conversions **Registers**: Buffer registers, Shift registers (SISO, SIPO, PISO, PIPO) **Counters**:Asynchronous and Synchronous Counters, Ring counter, Johnson counter, Modulus counter (IC 7490)	5
3.	**Algorithmic State Machines:** Introduction to Finite State Machines (FSM) and Algorithmic State Machines (ASM), ASM Charts: Notations, Construction, and Realization for Sequential Circuits. Sequence Generator and Sequence Detector	4
4.	**Programmable Logic Devices** (PLD): **Introduction to PLDs**: ROM, PLA, PAL , Designing Combinational Circuits using PLDs , Applications of PLDs in digital circuit design	4
5.	**Microprocessor Architecture:** Overview of Microprocessors and their role in digital systems **Architecture of 8086 Microprocessor:** Registers, Flags, Instruction Pointer Instruction Set: Data Movement, Arithmetic & Logic, Control Transfer Instructions Addressing Modes: Immediate, Direct, Indirect, Indexed, Register Addressing	5
6.	**Microcontroller Architecture:** Introduction to Microcontrollers and their applications, Comparison between Microprocessors and Microcontrollers, Overview of MCS-51 Architecture (8051 Microcontroller): Block Diagram, Memory Organization, Port Structure, Timers, Serial Communication Modes, Interrupt Structure , Overview of Instruction Set and Applications in Embedded Systems	5
	TOTAL	**28**

Text Books:

1. "Digital Logic and Computer Design" by M. Morris Mano, Michael D. Ciletti
2. "Modern Digital Electronics", by R.P.Jain
3. "Microprocessor Architecture, Programming, and Applications with the 8085" by Ramesh Gaonkar
4. "The 8051 Microcontroller and Embedded Systems" by Muhammad Ali Mazidi, Janice Mazidi, and Rolin McKinlay
5. "Digital Design: With an Introduction to the Verilog HDL" by M. Morris Mano and Michael D. Ciletti

Reference Books:

1. "Digital Principles and Applications**"** by Donald P. Leach, Albert Paul Malvino, and Goutam Saha
2. "Microprocessor and Interfacing**"** by Douglas V. Hall

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** II		
Course: Digital Systems Design and Architecture Laboratory							**Code:** 26COES203P

Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Basic knowledge of number systems (binary, decimal), Understanding of fundamental physics related to electricity and circuits

Course Objectives:

1. To understand the fundamental principles of digital logic and its applications in circuit design
2. To design and analyze combinational and sequential circuits.
3. To familiarize students with state machines and algorithmic representation of sequential logic.
4. To introduce programmable logic devices and their applications in digital design.
5. To understand microprocessor architecture and its role in digital systems.
6. To gain knowledge of microcontroller architecture and its applications in embedded systems.

Course Outcomes:

CO1	Students will be able to design and implement combinational circuits using adders, multiplexers, and code converters.
CO2	Students will be able to design sequential circuits using flip-flops, registers, and counters.
CO3	Students will be able to represent and design digital systems using state machines and algorithmic state machines.
CO4	Students will be able to design combinational logic circuits using programmable logic devices (PLD).
CO5	Students will understand the architecture of the 8086 microprocessor and write basic programs using its instruction set.
CO6	Students will gain knowledge of microcontroller architecture and its applications in embedded system design.

List of Experiments:

GROUP A

1. Design and implement code converters- Binary to Gray and BCE to Excess-3
2. Design and implement of Half Adder/ Full Adder using a) Basic Gates b) Universal Gates
3. Realization of Boolean function using Multiplexer 74151/74153, Demultiplexer 74154 / 74138.
4. Design and implementation of 1-bit comparator and 2-bit comparator
5. Design and implementation of parity generator

GROUP B (Any Three)

1. Verify characteristic tables of SR, JK, D & T Flip-flop
2. Design and implementation of Asynchronous/synchronous 3-bit counter using D flip-flop
3. Design and implement of Sequence generator/ detector using JK flip-flop
4. Design and implement MOD-10 counter using IC7490

GROUP C

10. Study of SISO, SIPO, PISO & PIPO shift register
11. Study of Microcontroller 8051: Features, Architecture & Programming Model

Text Books:

1. "Digital Logic and Computer Design" by M. Morris Mano, Michael D. Ciletti

2. "Modern Digital Electronics", by R.P.Jain
3. "Microprocessor Architecture, Programming, and Applications with the 8085" by Ramesh Gaonkar
4. "The 8051 Microcontroller and Embedded Systems" by Muhammad Ali Mazidi, Janice Mazidi, and Rolin McKinlay
5. "Digital Design: With an Introduction to the Verilog HDL" by M. Morris Mano and Michael D. Ciletti

Reference Books:

1. "Digital Principles and Applications" by Donald P. Leach, Albert Paul Malvino, and Goutam Saha
2. "Microprocessor and Interfacing" by Douglas V. Hall

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** II		
Course: Foundations of C++ Programming							**Code:** 26COES204		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
03	-	-	03	40	60	-	-	-	100

Prerequisites:

Basic Programming Concepts, Procedural Programming Knowledge, Pointers and Memory Management, Mathematical Foundations, Basic Understanding of Algorithms

Course Objectives:

1. To introduce the fundamental programming paradigms and demonstrate the shift from procedural to object-oriented programming.
2. To explore key OOP principles such as classes, inheritance, polymorphism, and encapsulation.
3. To provide hands-on experience in solving problems using C++.
4. To enable students to handle advanced features like operator overloading, file handling, templates, and exception handling.
5. To strengthen the ability to design and implement robust programs following object-oriented methodologies.

Course Outcomes:

CO1	Students will be able to differentiate between various programming paradigms and apply basic object-oriented concepts in C++
CO2	Students will understand and implement different types of inheritance using C++
CO3	Students will be able to implement static and dynamic polymorphism in C++ programs
CO4	Students will develop generic programs using templates and manage exceptions in C++ programs.
CO5	Students will implement file handling techniques and manipulate file data using C++
CO6	Students will handle advanced OOP concepts such as dynamic memory management and STL usage.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Introduction to Programming Paradigms:** Role and importance of programming languages, Characteristics of good programming languages **Overview of programming paradigms**: Procedural, Object-Oriented, Logical, and Functional, Comparison between Procedural and Object-Oriented Programming (OOP). **Features of Object-Oriented Programming (OOP):** Abstraction, Encapsulation, Inheritance And Polymorphism. **C++ Syntax**: Data types, Variables, Operators, Flow Control, Arrays, Pointers **C++ Classes**: Private, Public, Constructors, Destructors, Member Data, Member Functions	6
2.	**Inheritance**: Concept of Class Hierarchy and Derived Classes, **Types of Inheritance**: Single, Multiple, Multilevel, and Hybrid Inheritance Role of Virtual Base Class, Constructor and Destructor Execution in Derived Classes ,Base Class Initialization using Derived Class Constructors	8
3.	**Polymorphism**: Static Binding and Dynamic Binding, Static Polymorphism: Function Overloading, Ambiguity in Function Overloading, Operator Overloading (Unary and Binary Operators),	7

	Operator Overloading Using Friend Functions, String Manipulation using Operators, **Dynamic Polymorphism:** Base Class Pointers, Object Slicing, Method Overriding, Virtual Functions, Pure Virtual Functions, Abstract Classes	
4.	**Generic Programming & Exception Handling**: Introduction to Generic Programming, Function Templates, Class Templates, Templates with Multiple Parameters, Exception Handling: Fundamentals, Multiple Catch Blocks, Nested try Statements, Uncaught Exceptions, Stack Unwinding, throw and rethrow	7
5.	**File Handling in C++:** Introduction to File Handling and File Stream Classes, File Operations: Opening, Closing Files, Detecting End of File (EOF), File Modes, File Pointer Manipulation and Sequential I/O Operations, Random Access to Files, Error Handling during File Operations	7
6.	**Advanced Object-Oriented Concepts:** Operator Overloading: Friend Functions, Assignment Operators Dynamic Memory Management: new and delete operators, Smart Pointers and Reference Counting, Introduction to Standard Template Library (STL): Containers, Iterators, Algorithms, Real-world Case Studies in Object-Oriented Design.	7
	TOTAL	**42**

Text Books:

1. E. Balagurusamy, Object-Oriented Programming with C++, McGraw Hill.
2. Bjarne Stroustrup, The C++ Programming Language, Addison-Wesley
3. Robert Lafore, Object-Oriented Programming in *C++*, SAMS Publishing

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** II		
Course: Fundamentals of Computer Systems and Networking							**Code**: 26COPC201		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
02	-	-	02	40	60	-	-	-	100

Prerequisites:

Basic knowledge of computers and binary systems.

Course Objectives:

1. To understand the architecture and functioning of computer systems.
2. To explore fundamental networking concepts and technologies.
3. To develop foundational knowledge of operating systems and computer organization.
4. To learn about various networking models, protocols, and data communication methods.
5. To understand the role of hardware and software in computing and networking.

Course Outcomes: After completion of this course, students will able to -

CO1	Understand the basic components and organization of a computer system and the role of operating systems in managing hardware and software.
CO2	Gain insights into the organization and architecture of a computer, including CPU functioning and memory hierarchy.
CO3	Understand basic networking concepts, data communication modes, network topologies, and the types of networks.
CO4	Describe the OSI and TCP/IP models, along with understanding key networking protocols and addressing techniques.
CO5	Understand the basic concepts of network security, including encryption, firewalls, and security protocols to protect communication.
CO6	Explore the emerging trends in computer systems and networking, including cloud computing, IoT, and advancements in network technologies

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Introduction to Computer Systems:** **Overview of Computers**: History of computers (evolution and key milestones), Types of computers: Analog, Digital, And Hybrid. Applications of Computers: In education, healthcare, business, entertainment, and other fields. **Components of a Computer System:** Hardware vs. Software, Basic hardware components (CPU, memory, storage, input/output devices). **Introduction to Operating Systems:** Functions (process, memory, file system, device management), Types (batch, time-sharing, real-time, distributed, embedded), Structure (Kernel, Shell, System Utilities).	4

2.	**Computer Architecture and Organization:** Basic Structure of a Computer: Von Neumann architecture, instruction cycle. CPU Organization: ALU, Registers, Control Unit. Buses and Interfacing: Overview of data transfer methods (bus organization, control lines). Memory Architecture: Memory hierarchy, RAM, ROM, Cache, Virtual Memory. I/O Systems: I/O devices, I/O addressing, and basic concepts of interrupts and DMA. Display Technologies: Explore different display types (CRT, LCD, LED), display technology fundamentals, resolution, and refresh rate	4
3.	**Data Communication and Networking Fundamentals:** Data Communication: Types of data transmission, Modes (Simplex, Half-duplex, Full-duplex), Transmission media (Wired, Wireless) Network Topologies: Bus, Star, Ring, Mesh, Hybrid. Types of Networks: LAN, WAN, MAN, PAN Overview of Networking Devices: Switches, Routers, Modems, Hubs, Repeaters **Introduction to the Internet**: Basics of how the internet works, Internet protocols	5
4.	**Networking Models and Protocols:** OSI Model: Layers and functions. TCP/IP Model: Layers and comparison with OSI. IP Addressing: IPv4, IPv6, Subnetting, CIDR. Network Protocols: HTTP, FTP, SMTP, DNS, DHCP, ICMP. **Packet Switching vs. Circuit Switching**: Fundamental differences and use cases.	5
5.	**Introduction to Network Security:** Fundamentals of Network Security: Threats, Attacks, Vulnerabilities. Cryptography Basics: Symmetric and Asymmetric Encryption, hashing. Firewalls and Intrusion Detection Systems (IDS): Working principles of firewalls and intrusion detection systems. Security Protocols: SSL/TLS, IPSec, VPN. **Authentication and Access Control**: Overview of methods such as passwords, biometrics, multi-factor authentication.	5
6.	**Emerging Trends in Computer Systems and Networking:** **Cloud Computing**: Basics, service models (IaaS, PaaS, SaaS), deployment models (public, private, hybrid). **Virtualization**: Concept of virtual machines, hypervisors. Internet of Things (IoT): Architecture, Applications, Challenges. 5G Networking: Features, use cases, and its role in modern communications. Edge and Fog Computing: Concepts and Applications. **Data Centers**: Fundamentals, architectures, and their role in modern computing.	5

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** II	
Course: Fundamentals of Computer Systems and Networking Laboratory								**Code**: 26COPC201P	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Basic knowledge of computers and binary systems.

Course Objectives:

1. To understand the architecture and functioning of computer systems.
2. To explore fundamental networking concepts and technologies.
3. To develop foundational knowledge of operating systems and computer organization.
4. To learn about various networking models, protocols, and data communication methods.
5. To understand the role of hardware and software in computing and networking.

Course Outcomes: After completion of this course, students will able to -

CO1	Understand the basic components and organization of a computer system and the role of operating systems in managing hardware and software.
CO2	Gain insights into the organization and architecture of a computer, including CPU functioning and memory hierarchy.
CO3	Understand basic networking concepts, data communication modes, network topologies, and the types of networks.
CO4	Describe the OSI and TCP/IP models, along with understanding key networking protocols and addressing techniques.
CO5	Understand the basic concepts of network security, including encryption, firewalls, and security protocols to protect communication.
CO6	Explore the emerging trends in computer systems and networking, including cloud computing, IoT, and advancements in network technologies

List of Experiments:

Group A: Fundamentals of Computer Systems: (Any 8)

1. Disassemble and identify key components of a computer system (CPU, RAM, motherboard, storage, etc.). Discuss functionalities and basic maintenance practices.
2. Use a simulator to demonstrate the instruction execution process in a CPU and explore the memory hierarchy (RAM, cache, virtual memory). **Open-source software**: SimulIDE, Little Man Computer Simulator.
3. Create a diagram of a motherboard, labeling key components (CPU socket, RAM slots, expansion slots, connectors) and explaining their functions. **Open-source software**: Dia, Fritzing.
4. Install and configure an expansion card (e.g., graphics card or network card) in a computer.
5. Compare HDD and SSD by conducting performance tests (e.g., read/write speed tests).
6. Open-source software: Crystal DiskMark, KDisk Mark (Linux)
7. Install an operating system (e.g., Windows, Linux) on a computer.

8. Open-source software: Ubuntu, Fedora.
9. Benchmark a GPU using a graphics-intensive application and analyze its performance.
10. Open-source software: Unigine Heaven Benchmark, GLMark2
11. Compare different display technologies (CRT, LCD, LED) in terms of resolution, refresh rate, and overall quality.
12. Diagnose and resolve a hardware or software problem in a computer system.
13. Open-source software: HWInfo, Speccy.
14. Install and configure antivirus software, demonstrating its features.
15. Open-source software: ClamAV.

Group B: Fundamentals of Networking: (Any 5)

1. Set up a small LAN and demonstrate data transfer between devices. O**pen-source software**: Wireshark, Ether Ape
2. Configure a switch and a router for a network, demonstrating their roles in data communication. **Open-source software**: Cisco Packet Tracer, GNS3.
3. Simulate data transfer using the TCP/IP model and analyze packet data. **Open-source software**: Wireshark.
4. Create a presentation on common malware and viruses, including preventive measures and real-world examples.
5. Research and create a report on different data center topologies and architectures (e.g., star, mesh, tree).

Conduct a case study of a specific data center or take a virtual tour of a data center, highlighting key components and their functions.

Text Books:

1. David A. Patterson and John L. Hennessy, "Computer Organization and Design: The Hardware/Software Interface," Morgan Kaufmann, 2017.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** II	
Course: C++ Programming Laboratory								**Code:** 26COVS202	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	04	-	02	-	-	50	-	-	50

Prerequisites:

Basic understanding of programming logic, flowcharts, and pseudocode. Fundamental knowledge of data types, variables, and operators

Course Objectives:

1. To introduce the concepts of object-oriented programming using C++.
2. To understand the syntax and structure of C++ programs.
3. To develop problem-solving skills by applying C++ programming constructs.
4. To learn the implementation of classes, objects, constructors, and various OOP features.
5. To explore advanced C++ concepts like operator overloading, inheritance, and exception handling.
6. To gain hands-on experience in memory management and data structure implementation using C++

Course Outcomes:

CO1	Write, compile, and execute basic C++ programs for simple problem-solving
CO2	Implement object-oriented programming principles like classes, objects, and inheritance in C++
CO3	Develop programs that perform complex operations such as operator overloading and memory management.
CO4	Apply dynamic memory allocation and exception handling techniques in C++ programs
CO5	Solve real-world problems by implementing matrix operations and other complex data structures using C++.
CO6	Demonstrate the use of pointers, constructors, and destructors in C++ applications

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Basics of C++ Programming:** Introduction to C++ syntax, Input/Output operations. Control structures: if-else, switch-case, loops (for, while, do-while). Arrays and string handling in C++	9
2.	**Basic Problem-Solving with C++:** Number reversal and factorial calculation, Prime number generation Finding largest and smallest elements in a list.	9
3.	**Dynamic Memory Allocation and Sorting:** Arrays and dynamic memory management using new and delete. Sorting algorithms and their implementation in C++.	9
4.	**Object-Oriented Programming:** Class declaration and member functions. Constructors: default, parameterized, and copy constructors.	9

	Implementing a class STUDENT with data members and member functions.	
5.	**Advanced Concepts in C++:** Operator overloading (unary and binary). Function overloading and friend functions. Pointers and dynamic object access.	10
6.	**Inheritance, Exception Handling, and Matrix ADT:** Inheritance: Single, Multiple, Multilevel, Hierarchical. Matrix operations using the Matrix ADT class. Exception handling and constructors/destructors.	10
	TOTAL	**56**

List of Experiments: (Any Nine experiments from list 1 to 11 are mandatory and an experiment 12 is mandatory)

1	**Introduction to C++ Programming** Write basic C++ programs demonstrating: • Input/Output operations • Class and object definitions • Control statements (if-else, switch-case) • Looping (for, while, do-while) • Array manipulation • String handling
2	Write a C++ program to calculate the factorial of a given number
3	Write a C++ program to generate all prime numbers between 1 and n, where n is provided by the user.
4	**Sorting and Dynamic Memory Allocation: (Any one)** a) Write a C++ program to sort a list of numbers in ascending order. b) Write a C++ program to illustrate dynamic memory allocation using the new and delete keywords
5	**Class Definitions and Constructors:** a) Write a C++ program illustrating class declaration, definition, and member access. b) Write a C++ program to demonstrate the use of default, parameterized, and copy constructors.
6	**Implementing a Class STUDENT** a) Write a C++ program to implement a class **COURSE** with the following members: **Data Members:** • **CourseName**: Name of the course • **CourseCode**: Unique code for the course • **Credits**: Credits assigned to the course • **StudentList[]**: Array to store names of enrolled students • **MaxStudents**: Maximum number of students that can enroll in the course **Member Functions:** • **initialize()**: Assign initial values to the course (CourseName, CourseCode, Credits, MaxStudents) • **enrollStudent()**: Enroll a new student in the course if the course is not full.

	• **displayCourseInfo()**: Display the course details along with the enrolled students. • **totalEnrolled()**: Calculate and display the total number of students enrolled in the course.
7	**Operator and Function Overloading:** a) Write a C++ program demonstrating: • Operator overloading for unary and binary operators. • Function overloading for multiple function definitions. b) Write a C++ program to demonstrate friend functions and friend classes.
8	**Pointers and Object Access** a) Write a C++ program to dynamically allocate memory for an object of the class **EMPLOYEE** and access its members using pointers. b) Write a C++ program to generate a Fibonacci series using a constructor to initialize data Members.
9	**Matrix ADT Implementation** Write a C++ program to implement a matrix Abstract Data Type (ADT) using a class. The operations supported by this ADT are: • Reading a matrix • Addition of matrices • Subtraction of matrices • Printing a matrix.
10	**Inheritance in C++:** Write C++ programs to demonstrate the following forms of inheritance: (a) Single Inheritance (b) Multiple Inheritance (c) Multilevel Inheritance (d) Hierarchical Inheritance
11	**Constructors and Base Class Pointer** a) Write a C++ program to illustrate the order of execution of constructors and destructors when a new class is derived from more than one base class. b) Write a C++ program to invoke derived class members through a base class pointer.
12	**Exception Handling in C++:** a) Write a C++ program containing a possible exception. Use a try block to throw the Exception and a catch block to handle it. b) Write a C++ program to demonstrate catching all exceptions using generic exception Handlers.

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** II		
Course: Professional Development - II							**Code:** 26COCC203		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	04	-	02	-	-	50	-	-	50

Course Objectives:

1. To introduce students on employability skills and its importance in building career and professional life.
2. To inculcate prime and significant soft skills like presentation skills, communication skills etc required in today's professional environment.
3. To make students aware of employability skills like correspondence at work, team work and workplace etiquette to imbibe better employability maturity

Course Outcomes: After completion of this course, students will be able to -

CO1	Aware of change management from academic environment to corporate and industrial environment for an effective start in career, personal life, at workplace, society and professional world.
CO2	Understand the importance of necessity of prime soft skills like employability skills, presentation skills and communication skills required in today's professional workplace environment.
CO3	To be aware of significance of Special skills to excel at workplace and tapping team leader opportunities at engineering and technological organizations with finest work etiquette demonstration as a ladder for better growth and leadership perspective.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Employability Skills:** Preparing for employment- transition from education to employment, selection process understanding, modern cv styles based on sector of employment, core and technical skills formulation and authentication, group discuss strategies and guidelines, Stages of interview- aptitude, technical, GD and personal interview	16
2.	**Prime skills at work place:** Employability skills, raising your employability quotient, researching own perspective at workplace communication and organization culture, communication and interpersonal relations, significance of presentation skills in corporate world, overcoming fear of public speaking, correspondence at work	16
3.	**Special skills to excel at workplace:** Work correspondence: Importance and types of work correspondence, seven Cs of communication, mechanics of effective business correspondence Teamwork: understanding team behaviors, teamwork as employability skill, significance of team spirit Workplace Etiquette: Etiquette in the modern workplace, Etiquette -global and local, gender sensitivity, Etiquette in interaction, Netiquette, non-office hours and party times business meets do and do nots, character building and careful identity creation in the organization.	16

LIBERAL LEARNING COURSES - II

(Select any one course from the given Liberal Learning Courses)

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** II		
Course: Liberal Learning – II (Guitar)							**Code:** 26COCC204A		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Basic knowledge of Indian classical music and Guitar musical instrument.

Course Objectives:

1. To enhance guitar skills through intermediate fingerpicking, lead techniques, and genre exploration, culminating in a polished final performance.

Course Outcomes: After completion of this course, students will be able to -

CO1	Execute intermediate fingerpicking techniques with precision and rhythm.
CO2	Apply advanced lead guitar techniques and pentatonic scales effectively.
CO3	Perform confidently across various genres including blues, rock, folk, and classical.
CO4	Deliver a polished final performance through focused practice and preparation.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	Rhythm and Timing.	2
2.	Time Signatures.	2
3.	Understanding Basic Rhythms.	2
4.	Circle of Fifths.	2
5.	Introduction to Minor Scales.	2
6.	Advanced Chord Shapes.	2
7.	Introduction to Lead Techniques.	2
8.	Introduction to Pentatonic Scale.	2
9.	Practice and Review.	2
10.	Exploring Different Genres.	2
11.	Final Project Planning.	2
12.	Intensive Practice.	2
13.	Pre-Performance Preparation.	2
14.	Final Performance.	2
	TOTAL	**28**

Text Books:

1. David Hodge, "Guitar Theory", DK Publishing.

Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Basic knowledge of Indian classical music in singing.

Course Objectives:

1. To develop advanced singing techniques and ear training through Indian classical music, focusing on repertoire selection, effective rehearsal, and performance presentation.

Course Outcomes: After completion of this course, students will be able to -

CO1	Master legato, staccato, and advanced vocal methods in Indian classical music.
CO2	Improve musical ear through rigorous training and diverse classical repertoire.
CO3	Apply effective rehearsal strategies to prepare and present a polished performance.
CO4	Deliver a well-executed performance of selected Indian classical pieces with artistic expression

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	Vibrato and Ornamentation.	2
2.	Range Extension.	2
3.	Legato and Staccato.	2
4.	Advanced Ear Training.	2
5.	Basics of Indian Semi Classical Music.	2
6.	Improvisation Techniques.	2
7.	Selecting Repertoire for Performance.	2
8.	Rehearsal Techniques.	2
9.	Dress Rehearsal.	2
10.	Final Performance.	2
11.	Performance Review.	2
12.	Exploring New Repertoire.	2
13.	Advanced Techniques and Styles.	2
14.	Course Recap and Future Directions.	2
	TOTAL	**28**

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** II	
Course: Liberal Learning – II (Cinematography)								**Code:** 26COCC204C	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

A basic understanding of film theory, Camera operation, Lighting techniques and visual storytelling.

Course Objectives:

1. To master videography by learning camera techniques, shooting methods, and editing, culminating in a final project showcasing advanced skills in video production.

Course Outcomes: After completion of this course, students will be able to -

CO1	Operate camera components and techniques for steady, sharp video shooting.
CO2	Apply rule of thirds, framing, and stabilization methods effectively.
CO3	Use advanced editing tools and sound design for polished video projects.
CO4	Deliver a comprehensive final video project demonstrating learned skills.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	Introduction to Videography	2
2.	Understanding camera components (lens, sensor, viewfinder)	2
3.	Techniques for steady shooting (tripods, handheld, gimbals)	2
4.	Understanding the rule of thirds, leading lines, and framing in video	2
5.	In-depth explanation of the exposure triangle: aperture, shutter speed, and ISO	2
6.	Importance of audio in videography	2
7.	Techniques for achieving sharp focus	2
8.	Motion and Stabilization	2
9.	Storyboarding and Planning	2
10.	Filming Techniques	2
11.	Introduction to Video Editing	2
12.	Introduction to advanced editing tools (color correction, audio editing, effects)	2
13.	Sound Design and Mixing	2
14.	Final Project Presentation and Review	2
	TOTAL	**28**

-	02	-	01	-	-	25	-	-	25

Prerequisites:

Good stamina, flexibility and familiarity with simple rhythmic patterns and beats.

Course Objectives:

1. To develop advanced dance techniques, expressive skills, and performance readiness in Indian classical dance, culminating in a final performance.

Course Outcomes: After completion of this course, students will be able to -

CO1	Develop advanced techniques in footwork, postures, and hand gestures, with a focus on fluidity and expression.
CO2	Embody various characters and emotions through in-depth exploration of Abhinaya (expressional dance).
CO3	Execute learned dance pieces with precision, synchronization, and advanced rhythmic variations.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	Introduction to Character Portrayal.	2
2.	Rehearsal and Feedback.	2
3.	Advanced Footwork and Postures.	2
4.	Advanced Hand Gestures and Movements.	2
5.	Rhythmic Variations and Combinations.	2
6.	Rehearsal of Dance Piece.	2
7.	Performance Techniques.	2
8.	Integrating Steps and Expressions.	2
9.	Full Dress Rehearsal.	2
10.	Improvisation and Creative Movement.	2
11.	Corrections and Adjustments.	2
12.	Mini Performance.	2
13.	Introduction to Abhinaya in Depth.	2
14.	Preparing a New Short Dance Item.	2

-	02	-	01	-	-	25	-	-	25

Prerequisites:

Basic knowledge of Indian classical music and Keyboard musical instrument.

Course Objectives:

1. To develop advanced musical skills through complex progressions, improvisation, and composition, culminating in a polished performance and mastery of selected repertoire.

Course Outcomes: After completion of this course, students will be able to -

CO1	Apply complex chord progressions and advanced scales effectively in performance.
CO2	Demonstrate proficiency in improvisation and advanced chord voicings.
CO3	Perform selected repertoire with refined technique and stage presence.
CO4	Successfully showcase learned skills through a polished recital or performance.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	Introduction to more complex progressions (e.g., ii-V-I)	2
2.	Basics of improvisation	2
3.	Learning advanced scales (e.g., blues scale, pentatonic scale)	2
4.	Learning advanced chord voicings and inversions	2
5.	Advanced Arpeggios and Runs	2
6.	Basics of composing music	2
7.	Initial practice on selected repertoire	2
8.	Focused practice on repertoire pieces	2
9.	Understanding stage presence and performance techniques	2
10.	Final adjustments and practice on repertoire	2
11.	Attending or reviewing a masterclass	2
12.	Receiving personalized feedback on playing	2
13.	Dress rehearsal for recital or performance	2
14.	Showcasing learned skills and pieces	2

-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To master advanced basketball skills, strategies, and mental conditioning to excel in team play, complex scenarios, and tournament preparation.

Course Outcomes: After completion of this course, students will be able to -

CO1	Demonstrate mastery of advanced dribbling, passing, shooting, and defensive techniques.
CO2	Apply complex defensive systems, advanced team play, and game strategies in mixed scenarios.
CO3	Develop the mental toughness, conditioning, and strategic insights needed for successful tournament performance

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**Revision Of Fundamentals:** Review all Semester I skills. Recall and perform basic techniques correctly.	2
2.	**Body Technique & Footwork:** Learn pivoting, stopping and changing direction. Perform basic basketball footwork correctly.	2
3.	**Combined Skill Practice:** Combine passing, dribbling and shooting drills. Integrate fundamental basketball skills.	2
4.	**Player Stance & Ball Control:** Improve balance and ball protection. Maintain proper stance during play	2
5.	**Passing & Receiving Drills:** Practice passing with movement. Improve passing accuracy and coordination.	2
6.	**Dribble Control:** Develop speed and control while dribbling. Demonstrate improved dribbling ability.	2
7.	**Assessment – III**	2
8.	**Shooting Practice:** Practice set shots and lay-ups repeatedly. Improve shooting consistency.	2
9.	**Rebounding Practice:** Apply rebounding techniques in drills. Secure rebounds with correct positioning.	2
10.	**Individual Defence Practice:** Practice one-on-one defensive drills. Defend an opponent using proper stance.	2
11.	**Footwork Drills**: Improve pivoting and movement efficiency. Demonstrate better balance and coordination.	2
12.	Combined Passing & Dribbling: Perform passing after dribbling. Coordinate ball handling with passing.	2
13.	**Combined Shooting Drill**: Shoot after dribbling and passing. Apply shooting in simple game situations.	2
14.	**Assessment - IV**	2
	TOTAL	**28**

Course: Liberal Learning – II (Cricket)							**Code:** 26COCC204G		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To develop advanced cricket skills and strategies in batting, bowling, and fielding, with a focus on mental conditioning, tactical execution, and competitive performance through intensive practice and match simulations.

Course Outcomes: After completion of this course, students will be able to -

CO1	Demonstrate advanced techniques in batting, bowling, and fielding, including targeted drills and intensive practice.
CO2	Apply batting and bowling strategies, and execute tactical plans during match simulations and competitive play.
CO3	Develop strong mental conditioning and teamwork skills, preparing for high-performance in competitive matches and final assessments.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**Advanced Batting Footwork**: Improve movement against pace and spin	2
2.	**Stroke Production:** Cover drive, straight drive, sweep, lofted shots	2
3.	**Batting Against Spin:** Reading length and line	2
4.	**Advanced Fast Bowling:** Yorkers, bouncers, slower balls	2
5.	**Advanced Spin Bowling:** Flight, drift, turn, variations	2
6.	**Fielding Techniques:** Slip catching, close-in catching	2
7.	**Assessment - III**	2
8.	**Advanced Wicket Keeping:** Standing up to spinners, stumping's	2
9.	**Running Between Wickets:** Calling, turning, decision-making	2
10.	**Team Communication:** On-field coordination	2
11.	**Fitness For Cricket**: Agility, endurance, speed	2
12.	**Match Simulation:** Game scenarios	2
13.	**Practical & Theory Assessment:** Evaluate semester ii competencies	2
14.	**Assessment - IV**	2
	TOTAL	**28**

Text Books:

1. Sanjay Manjrekar, "Cricket Fundamentals", Orient BlackSwan
2. Ravi Shastri, "Winning Cricket: Skills and Strategies", Notion Press

Reference Books:

1. Sachin Tendulkar, "Playing It My Way", Hachette India

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** II		
Course: Liberal Learning – II (Rifle and Pistol Shooting)							**Code:** 26COCC204H		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To achieve advanced proficiency in rifle shooting through specialized training, technical refinement, and mental preparation for competitive performance.

Course Outcomes: After completion of this course, students will be able to -

CO1	Master advanced rifle shooting techniques and positions to achieve higher scores.
CO2	Develop strong mental preparation and focus techniques for peak performance and overcoming technical hurdles.
CO3	Gain specialized training and match practice, preparing them for ISSF events and advanced shooting challenges.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**Dry Fire Practice**	2
2.	**Live Fire Introduction:** 1st attempt of live firing	2
3.	**Shot Grouping Practice:** Grouping and its process	2
4.	**Common Shooting Errors and Corrections**	2
5.	**Target Analysis:** How to analyse fired target	2
6.	**Zeroing:** Body zero and its importance	2
7.	**Assessment - III**	2
8.	**Standing Position Practice:** To take a proper body position and balancing the body weight properly.	2
9.	**Sitting Position Practice:** Focusing on triggering and making close grouping	2
10.	**Position Transition Drills:** Knowledge about correct position and its steps	2
11.	**Accuracy Improvement Drills**	2
12.	**Speed and Precision Shooting:** To do the process in given time and releasing the shot in correct timing	2
13.	**Trigger Reset Techniques:** Triggering steps	2
14.	**Assessment - IV**	2
	TOTAL	**28**

Reference Books:

1. David Watson, "ABCs of Rifle Shooting", Gun Digest (Imprint of KP Books), 2014

E-Resources:

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)								**Semester:** II	
Course: Liberal Learning – II (Volleyball)								**Code:** 26COCC204I	
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To achieve advanced proficiency in volleyball by mastering complex techniques, strategic systems, and mental conditioning, while preparing for competitive play and tournament scenarios.

Course Outcomes: After completion of this course, students will be able to -

CO1	Demonstrate expertise in advanced serving, spiking, setting, and blocking techniques tailored to specific positions.
CO2	Implement complex offensive and defensive systems and adapt to mixed scenarios through situational drills and gameplay.
CO3	Develop mental toughness, conditioning, and strategic insights necessary for successful tournament preparation and performance.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**Timing and Approach:** Introduction to spiking approach, 2-step and 3-step approach, arm swing coordination, jump timing, take-off mechanics, balance, and practice drills.	2
2.	**Straight Smash:** Fundamentals of straight spike, correct hand contact, body positioning, jump and arm action, landing technique, target practice, and error correction.	2
3.	**Basic Blocking:** Ready position for blocking, footwork along the net, hand positioning, timing of the jump, blocking against different attacks, and safety precautions.	2
4.	**Single Blocking Technique:** Individual blocking skills, reading the attacker's movement, timing the block, penetration over the net, recovery after blocking, and practice drills.	2
5.	**Rolling and Diving:** Techniques of forward roll, side roll, and dive, safe landing methods, defensive recovery, floor movement drills, and injury prevention.	2
6.	**Court Positioning:** Player positions (1–6), offensive and defensive court coverage, movement according to ball direction, transition from attack to defence, and positional awareness.	2
7.	**Assessment - III**	2
8.	**Rotation System:** Volleyball rotation rules, clockwise rotation, serving order, positional faults, rotational movement, and practical game application.	2
9.	**Team Communication:** Communication signals, calling the ball, leadership on court, teamwork, coordination during rallies, and effective communication exercises.	2
10.	**Basic Offensive System (4-2):** Introduction to the 4–2 offensive formation, setter responsibilities, hitter positioning, attack combinations, player movement, and tactical execution.	2
11.	**Defensive Positioning:** Defensive formations, court coverage, reading opponents' attacks, blocking-defense coordination, and transition from defense to offense.	2
12.	**Mini Game (3 Vs 3):** Modified volleyball games emphasizing teamwork, communication, rotation, offensive and defensive skills, and decision-making in small-sided play.	2
13.	**Match Practice:** Full-game practice following official volleyball rules, application of	2

	learned skills and tactics, referee signals, scoring system, teamwork, and sportsmanship.	
14.	**Assessment - IV**	2
	TOTAL	**28**

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)							**Semester:** II		
Course: Liberal Learning – II (Football)							**Code:** 26COCC204J		
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	02	-	01	-	-	25	-	-	25

Prerequisites:

Proper health, Basic knowledge of rules of the game.

Course Objectives:

1. To enhance players' technical skills, tactical understanding, physical fitness, teamwork, and sportsmanship, fostering a comprehensive understanding and appreciation of the game.

Course Outcomes: After completion of this course, students will be able to -

CO1	Explain key concepts of transition play, positional drills, and the importance of endurance and stamina in football.
CO2	Apply advanced tactics during simulation matches, analyze high-pressure situations.
CO3	Students will design a game week routine that covers match preparation, mental and physical readiness, and post-match analysis, evaluating its impact on team performance and skills.

Course Contents:

Sr. No.	**Description**	**Duration (Hrs.)**
1.	**Shooting Techniques:** Demonstrate effective shooting techniques with proper body position, accuracy, power, and placement to create goal-scoring opportunities.	2
2.	**Finishing in Front of Goal:** Develop the ability to finish scoring opportunities in front of goal using accurate technique, quick decision-making, and composure under pressure.	2
3.	**Crossing Techniques:** Demonstrate effective crossing techniques with proper accuracy, timing, and delivery to create goal-scoring opportunities for teammates.	2
4.	**Tackling Techniques:** Demonstrate safe and effective tackling techniques using proper timing, body positioning, and decision-making to regain possession.	2
5.	**Defensive Skills:** Develop effective defensive skills through proper positioning, marking, interception, and teamwork to prevent attacking opportunities.	2
6.	**Goalkeeping Basics:** Demonstrate basic goalkeeping techniques including positioning, handling, diving, and distribution to effectively protect the goal.	2
7.	**Assessment - III**	2
8.	**Throw-ins:** Demonstrate correct throw-in techniques using proper body position, foot placement, and ball delivery to restart play effectively.	2
9.	**Free Kicks & Penalty Kicks:** Demonstrate proper techniques for taking free kicks and penalty kicks with accuracy, power, and decision-making to create scoring opportunities.	2
10.	**Running with the Ball:** Develop the ability to run with the ball using speed, control, and awareness to advance play and beat opponents effectively.	2
11.	**Communication on the Field:** Develop effective on-field communication skills through clear instructions, teamwork, and coordination to improve team performance.	2
12.	**Conditioning Drills:** Improve football-specific fitness through conditioning drills that develop endurance, speed, agility, strength, and overall match readiness.	2
13.	**Practice Match:** Apply technical skills, tactical understanding, teamwork, and decision-making effectively in a practice match situation.	2
14.	**Assessment - IV**	2

TOTAL	**28**

DEPARTMENT OF COMPUTER ENGINEERING

Program: B. Tech. (Computer Engineering)									**Semester:** II
Course: IT Proficiency									**Code:** 26COAE201
Teaching Scheme (Hrs/week)				**Evaluation Scheme (Marks)**					
Lecture	**Practical**	**Tutorial**	**Credit**	**CIE**	**ETE**	**TW**	**OR**	**PR**	**Total**
-	04	-	02	-	-	25	-	-	25

Prerequisites:

Basic Computer Skills

Course Objectives:

Develop proficiency in essential office software and tools, including MS Word, MS Excel, MS PowerPoint, and LaTeX, to create, analyze, and present professional documents and data effectively, while understanding ethical internet use and leveraging AI tools.

Course Outcomes:

CO1	Create and format professional documents using MS Word.
CO2	Organize and analyze data using Excel's features.
CO3	Apply advanced Excel functions, pivot tables, charts, and macros to analyze and secure data.
CO4	Create effective presentations using MS PowerPoint features.
CO5	Create Professional Documents Using LaTeX.
CO6	Apply ethical practices in using internet resources and AI tools.

Course Contents:

Unit	**Description**	**Duration (Hrs.)**
1.	**Basics of Computer and MS Word:** Awareness of computer Basics **MS-Word:** Text Basics, Text Formatting and saving file, Working with objects, Header &footers, Working with bullets and numbered lists, Tables, Styles and Content, Merging documents, Sharing and maintaining document, Proofing the document, Printing.	08
2.	**MS-Excel:** Introduction to Excel, Formatting excel work book, Perform calculations with functions, Sort and Filter data with Excel, Create effective 2D and 3D charts to Present data visually.	10
3.	**Advance MS-Excel** : Analyze data using pivot tables and pivot charts, Protecting and sharing the work book, Use Macros to automate tasks, Proofing and Printing, More useful functions in excel, Goal seek and scenario features, V-lookup and H-lookup functions, Advanced sort and filter in excel.	10
4.	**MS-PowerPoint**: Setting up PowerPoint environment, Creating slides and applying themes, Working with bullets and numbering, Working with objects, Hyperlinks and action buttons, Working with movies and sounds, Using SmartArt and Tables, Animation and slide transition, Using slide master,Slide show option, Proofing and Printing.	10
5	**Introduction to Latex:** Installation of the software LaTeX , Understanding Latex compilation, Basic Syntax, Writing equations, Matrix, Tables,	10

	Page Layout – Titles, Abstract Chapters, Sections, References, Equation references, citation. List making environments, Table of contents, Generating new commands, Figure handling, Numbering, List of figures, List of tables, Generating index. **Packages** - Geometry, Hyperref, amsmath, amssymb, algorithms, algorithmic graphic, color, tilezlisting.Classes: article, book, report, beamer, slides. IEEtran. **Applications -** Writing Resume,Writing articles/ research papers, project report.	
6	**Internet Ethics & AI tools** Working with Internet and-mail, Using the Internet, Internet Ethics and Safety, Social Media, **AI Tools**:Jasper,GitHub Copilot, Synthesia, Writesonic.	08
	TOTAL	**56**

List of Experiments:

1. Create a collaborative document project where multiple users contribute to a document using MS Word's track changes and commenting features.
2. To analyze and visualize data effectively using Excel's functions and charts, aiming to create insightful and dynamic data visualizations.
3. Develop a financial modeling project using Excel, incorporating advanced functions like goal seek, scenario analysis, and pivot tables. Build automation using macros for repetitive tasks.
4. Create an interactive multimedia presentation on a complex topic of interest. Incorporate animations, transitions, embedded videos, and interactive elements like hyperlinks and action buttons.
5. Design and implement a digital marketing campaign for a fictitious product or service. Create email newsletters, social media posts, and analyze campaign performance metrics.
6. Prepare research article using Latex.
