Connectivity/Bandwidth: Zensar suggests min. 1Mbps dedicated bandwidth for all 30 users.

Telephone and Networking arrangements: One small EPABX – which can be connected to Primary Rate Interface (PRI) with Direct Inward Dialing (DID) facility which would provide 24 extensions, (24 instruments + wiring) . Speaker Phone with outgoing call facility need to be installed.

- Memory: 8 GB RAM
- HDD: 40 GB
- Network: 10/100 Mbps connected to the Internet
- Monitor: 15 Inches
- Keyboard and Mouse

Each computer must be networked and connected to the Internet via a firewall or a proxy server.

In addition to the 30 M/c, one Server would be required (one with Windows Operating System or with Linux). The configuration is as follows:

- CPU: Intel PIV or equivalent 2.8+ Ghz.
- Memory: 8 GB RAM
- HDD: 80 GB
- Network: 10/100 Mbps connected to The college backbone
- Monitor: 15 inches
- Keyboard and Mouse
- Backup Device (DVD ReWriter)

Software requirements: This model would support both Linux and Windows Operating Systems and would use web-based connectivity using the industry recognized Internet browsers. The basic software requirement is mentioned below:

To achieve at least minimum level of network security, Zensar recommends the following components:

- Appliance based firewall (Cisco PIX etc.)
- Internet Proxy Server (Squid, Microsoft ISA Server)
- Antivirus

Other facilities required: Server Placements: The servers and network equipments to be placed in secured enclosure prevent unauthorized access.

Proxy/ Firewall: A firewall must be placed between the internet and the ZENSAR LAN to allow only legitimate traffic into the ZENSAR. An appliance based firewall is recommended but ZENSAR may also opt for software based firewalls, if the number of computers is less.

In case of a large number of users accessing the internet, a proxy server should be used to increase internet performance by caching and also putting in controls required to access the internet.

Printer: Institutions should install at least one printer per batch of 30 students. A network laser printer is most suitable for large networks.

Projector + Screen: A portable LCD projector may be required by the students to discuss and conduct presentations. It should preferably be placed in a discussion room.

It was a very educational experience. Training was conducted systematically starting from the basics & then increasing in level of difficulty. Explanation was provided properly. Real world applications were taught which simplified the learning process. Concepts like dynamic libraries, file handling, exceptions, generic methods, website designing were taught. We were given ample time to practice those concepts.

Sr. No.	DO'S	DON'T'S
1.	Increase in number of training days	We need a little more time to implement things that we learn.
2.	Training should be conducted weekly instead of having it daily for a whole week.	
3.	A mini project should be given which utilizes the concepts that were taught, to be submitted at the end of training session.

Feedback

It was an excellent training. We received more than what we expected. The practice sessions in between learning took all teaching to next level. We got enough time to practice each query and concept that we had but I would like to add that we think we may need little more to perfect those at that time only. All our concepts are clear now from basics like DDL DCL and DML commands to some complex triggers ,commits and call procedures.

Do's and Dont's of training session

Sr. No.	DO'S	DONT'S
1.	Training time should be more.	Training should not be over a full day along a full week.
2.	It should be spread over weeks.	It's kind of fast forwarding situation and we need little more time to implement what we had learned.
