Project Title - 'Determination of Safe Grade Elevation using HEC-RAS'  
Abstract- Flood is a naturally occurring disastrous event causing damages, losses and destruction to property, life and environment. For construction of any structure nearby a water body or in between a water body and for determination of safe level of construction to protect structure from flood water, is required. Safe Grade Elevation is simply the height or level provided to the structure at which, it will be safe from flood.

For assessment of flood line to produce safe grade elevation, River Analysis System made by Hydrologic Engineering Center (HEC-RAS) software is used.
